

Rmax Multi-Vent Nailable Base-3

Insulation for Above the Deck

Rmax Multi-Vent Nailable Base-3 is an energy efficient thermal insulation board bonded to superior solid vent blocks (not EPS foam spacers) and a nailing panel - allowing for maximum air flow in both directions to prevent heat build-up and help remove moisture from the roofing system.

Multi-Vent Nailable Base-3 comes standard with Multi-Max® FA-3 as the insulation layer and 7/16" APA rated OSB as the nailing panel. It can also be made with Ultra-Max® as the insulation layer. For all Forest Stewardship Council® Chain of Custody orders (or upon request), the product can be manufactured using FSC®-labeled panels (FSC® C101940).

Multi-Vent Nailable Base-3 is superior for use in residential or commercial steep slope roofing applications where a two-way vented assembly is desired. Multi-Vent Nailable Base-3 is applied to the roof structure in order to provide a layer of thermal insulation and a suitable substrate for the application of a variety of shingles available in today's market.

Rmax Multi-Vent Nailable Base-3 Benefits

- Durable glass fiber/organic or coated glass fiber facers
- Available with alternate nailing surfaces
- Allows for normal expansion of wood
- Reduces thermal loss
- Reduces moisture migration
- Saves on energy dollars
- Reduces material and labor costs
- Contributes towards LEED® credits
- Offers tax credits, where applicable

Rmax Multi-Vent Nailable Base-3 prevents heat build-up and helps remove moisture from the roofing system. It is an excellent insulation choice for residential or commercial steep slope roofing applications where a vented assembly is desired.
