APPLICATION/INSTALLATION

- All surfaces to which the tape is to be applied should be free of moisture, oils, dust, dirt and other debris that could inhibit adhesion. Clean surfaces with a dry cloth as necessary.
 - Center tape over surface to be sealed, e.g., board joint, fastener plate, etc.
 - Do not allow the tape to form voids or buckle as it is applied.
 - Wipe tape firmly from center out with feathering tool or hand roller to smooth out wrinkles. Applying more pressure yields more surface contact, and therefore, creates a greater bond.
 - Do not tear tape, cut with scissors or knife.
 - NOTE: For optimal performance, maintain a minimum of 3/4" coverage beyond the area to be sealed.
