

Toprock® DD

Low-Slope Roof Insulation

ROCKWOOL Toppack® DD is a rigid and high-density, uncoated stone wool insulation board for low-slope roof applications. Toppack DD is a suitable substrate for mechanically-attached membrane systems in low slope roofing.

Toppack® DD is noncombustible and will not develop toxic smoke or promote flame spread, even when directly exposed to fire. It can be used either as a base layer of thermal insulation in an assembly with Toppack® DD Plus or as the top layer of a hybrid roof assembly with polyisocyanurate or other roof insulations.

Toppack® DD has exclusive stone wool dual-density properties that feature a higher-density top layer, providing strong point load resistance and effective load distribution to minimize puncture damage to the membrane – particularly during installation.

Dimensionally Stable

Low co-efficient of linear expansion means minimal movement during temperature changes and no shrinking over time causing energy loss leading to reliable and consistent long-term thermal resistance.
