

Acceptable Sealants for use with Senersshield-R/-RS/-VB

INTRODUCTION

There are numerous opportunities for wet sealant material to come into contact with Senersshield-R/-RS/-VB in order to make connections that provide air barrier and water-resistive barrier continuity. Please be advised that the following sealant/primer combinations meet the peel strength of >5 lbf and <25% adhesion bond loss as per ASTM C920 when tested per ASTM C794 Adhesion-in-Peel on Senersshield-R/-RS/-VB.

Notes to Specifier

Applications with primer provided increased adhesion values in testing. Field tests should be employed if there are any questions of adhesion based on the specific project conditions. Consult the sealant manufacturer for recommendations and installation instructions for their materials.

The following sealant or sealant/primer combinations have acceptable adhesion to and are compatible with Senersshield-R/-RS/-VB.
