LEED®v4 New Construction, Core and Shell, Schools, Healthcare, Hospitality

Contributes toward satisfying EQ CREDIT: INDOOR ENVIRONMENTAL QUALITY- LOW-EMITTING MATERIALS 7/25/2019

updated 11/09/2021

Option 1. Product Category Calculations Achieve the threshold level of compliance with emissions and content standards for the number of product categories. **Thresholds of compliance with emissions and content standards** Interior paints and coatings applied on site At least 90%, by volume, for emissions; 100% for VOC content • General Emissions Evaluation for paints and coatings applied to walls, floors, and ceilings • VOC content requirements for wet applied products Additional VOC content requirements for wet-applied products. In addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must not contain excessive levels of VOCs, for the health of the installers and other tradesworkers who are exposed to these products. To demonstrate compliance, a product or layer must meet the following requirements, as applicable. Disclosure of VOC content must be made by the manufacturer. Any testing must follow the test method specified in the applicable regulation. All paints and coatings wet-applied on site must meet the applicable VOC limits of the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective June 3, 2011. • For projects in North America, methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealants. The products listed above have been independently certified by UL Environment in accordance with “UL 2818 –GREENGUARD Certification Program for Chemical Emissions for Building Materials, Finishes and Furnishings,” and/or Standard referenced: CDPH/EHLB/Standard Method V1.2 (January 2017) “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers” (aka CA Section 01350). For more information, see <http://www.cdph.ca.gov> Building products and Interior finishes are determined compliant in accordance with California Department of Public Health (CDPH) Standard Method V1.2-2017 using the applicable exposure scenario(s). GREENGUARD Certified products are certified to GREENGUARD standards for low chemical emissions into indoor air during product usage. For more information, visit ul.com. Certificates can be found on: www.greenguard.org or www.UL.com P,S,U= Primer, Sealer, Undercoater ^Category classification based on SCAQMD Rule 1113, 2011 and CARB 2007 SCM definitions.

Intent

To reduce concentrations of chemical contaminants that can damage air quality, human health, productivity, and the environment.

Requirements

This credit includes requirements for product manufacturing as well as project teams. It covers volatile organic compound (VOC) emissions in the indoor air and the VOC content of materials, as well as the testing methods by which indoor VOC emissions are determined. Different materials must meet different requirements to be considered compliant for this credit. The building interior and exterior are organized in seven categories, each with different thresholds of compliance. The building interior is defined as everything within the waterproofing membrane. The building exterior is defined as everything outside and inclusive of the primary and secondary weatherproofing system, such as waterproofing membranes and air- and water-resistive barrier materials.

Option 1. Product Category Calculations

Achieve the threshold level of compliance with emissions and content standards for the number of product categories.

Table 1. Thresholds of compliance with emissions and content standards

Category	Threshold	Emissions and content requirements
Interior paints and coatings applied on site	At least 90%, by volume, for emissions; 100% for VOC content	<ul style="list-style-type: none"> • General Emissions Evaluation for paints and coatings applied to walls, floors, and ceilings • VOC content requirements for wet applied products

General emissions evaluation. Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010, (current CDPH is V1.2-2017) using the applicable exposure scenario. The default scenario is the private office scenario. The manufacturer’s or third-party certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.

Manufacturers’ claims of compliance with the above requirements must also state the range of total VOCs after 14 days (336 hours), measured as specified in the CDPH Standard Method v1.1 (current CDPH is V1.2-2017):

- 0.5 mg/m³ or less;
- between 0.5 and 5.0 mg/m³; or
- 5.0 mg/m³ or more.

Additional VOC content requirements for wet-applied products. In addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must not contain excessive levels of VOCs, for the health of the installers and other tradesworkers who are exposed to these products. To demonstrate compliance, a product or layer must meet the following requirements, as applicable. Disclosure of VOC content must be made by the manufacturer. Any testing must follow the test method specified in the applicable regulation.

- All paints and coatings wet-applied on site must meet the applicable VOC limits of the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective June 3, 2011.
- For projects in North America, methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealants.

Definitions:

µg/m³= Microgram per cubic meter

mg/m³= Milligram per cubic meter

1 µg/m³ = .001 Milligrams

interior wall and ceiling finish all the layers comprising the exposed interior surfaces of buildings, including fixed walls, fixed partitions, columns, exposed ceilings, and interior wainscoting, paneling, interior trim or other finish applied mechanically or for decoration, acoustical correction, surface fire resistance, or similar purposes.

building interior everything inside a structure’s weatherproofing membrane

building exterior a structure’s primary and secondary weatherproofing system, including waterproofing membranes and air- and water-resistant barrier materials, and all building elements outside that system

Category classification based on SCAQMD Rule 1113, 2011 and CARB 2007 SCM definitions.

Healthcare, Schools only

Exterior applied products. Adhesives, sealants, coatings, roofing, and waterproofing materials applied on site must meet the VOC limits of California Air Resources Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings, and South Coast Air Quality Management District (SCAQMD), Rule 1168, effective July 1, 2005. Small containers of adhesives and sealants subject to state or federal consumer product VOC regulations are exempt.

Submit a list of all exterior applied materials and products used on site.

Identify the regulatory VOC content, allowable VOC limit, and the total volume used on site for each product to determine whether 90% by volume has been achieved. The regulatory VOC content must be expressed as g/L less water and exempt solvents except for low-solids coatings, which show the content in g/L less exempt solvents.

Per USGBC LEED v4: Intent:

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products from manufacturers who have verified improved environmental life-cycle impacts.

Requirements:

NC, CS, SCHOOLS, RETAIL, DATA CENTERS, WAREHOUSES & DISTRIBUTION CENTERS, HOSPITALITY, HEALTHCARE

Achieve one or more of the options below, for a maximum of 2 points.

Option 1. Environmental Product Declaration (EPD) (1 point)

Use at least 20 different permanently installed products sourced from at least five different manufacturers that meet one of the disclosure criteria below.

- Environmental Product Declarations which conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.

Product-specific Type III EPD – Products with third-party certification (Type III), including external verification in which the manufacturer is explicitly recognized as the participant by the program operator are valued as one whole product for purposes of credit achievement calculation.

This EPD was independently verified by NSF International in accordance with ISO 21930 and ISO 14025, by NSF International ncss@nsf.org.

<http://info.nsf.org/Certified/Sustain/listings.asp?ProdCat=EPD> This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by NSF International ncss@nsf.org. Certificates can be found on: ncss@nsf.org, <http://info.nsf.org/Certified/Sustain/listings.asp?ProdCat=EPD>, or www.paintdocs.com

Intent

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products for which the chemical ingredients in the product are inventoried using an accepted methodology and for selecting products verified to minimize the use and generation of harmful substances. To reward raw material manufacturers who produce products verified to have improved life-cycle impacts.

Requirements:

NC, CS, SCHOOLS, RETAIL NC, DATA CENTERS, WAREHOUSES & DISTRIBUTION CENTERS, HOSPITALITY NC, HEALTHCARE

Option 1. Material Ingredient Reporting (1 point)

Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm).

- **Product Lens Certification.**

For more information please visit: <http://www.usgbc.org/node/2616399?return=/credits/new-construction/v4/material-%26amp%3B-resources>

UL's Product Lens Certification is an ingredient disclosure tool that provides hazard information in context, fulfilling the new demands for product transparency.

The Product Lens certification is a result of collaboration between UL Environment, MBDC and Cradle to Cradle Product Innovation Institute, with UL basing the program's chemical assessment on the Materials Health Assessment Methodology from the Cradle to Cradle Certified™ Products program. The tool was developed in partnership with MBDC to meet and exceed the chemical disclosure requirements outlined by the design community and LEED®. With the program harmonized at the assessment level, manufacturers are able to progress further into the Cradle to Cradle certification programs as they desire.

Product Lens has been designed to meet credit requirements in LEED v4 for chemical disclosure (MR Credit: Building Product Disclosure and Optimization – Material Ingredients). All information is verified by UL, helping manufacturers address the skepticism inherent in self-disclosure, and signaling trust and legitimacy to specifiers and purchasers. Go to ul.com/spg to view the full, detailed materials ingredient list

Per USGBC LEED v4:

Intent:

To encourage the use of products and materials for which life cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To inform decision-making by project teams by rewarding building material manufacturers that share life cycle health, safety and environmental information about their products.

Requirements:

Use at least three different permanently installed products that have a documented qualitative analysis of the potential health, safety and environmental impacts of the product in five stages of the product's life cycle (product assembly/manufacturing, building product installation, product use product maintenance, end of product life/reuse).

Analyze and consider:

- Intended and reasonably anticipated uses of the product,
- Potential hazardous exposures,
- Product service life,
- Waste generation and/or materials reuse,
- Contributions to health, safety and the environment, including improvements to occupant safety, air quality, water quality, materials reuse, energy efficiency, and carbon mitigation.

Credit Specific

- Where verified quantitative information is available (e.g. EPDs, LCAs, ecolabels, standards), please include that information.
- If quantitative information is not available, qualitatively describe potential impacts.
- Note where information was not available and document the sources checked. If an impact isn't present at a specific life cycle phase, indicate it as non-applicable and briefly explain why that is the case.

Integrative Analysis LEED Pilot Credit documentation can be downloaded by product number and listed as IABM at: www.paintdocs.com

Healthcare, Schools only

Exterior applied products. Adhesives, sealants, coatings, roofing, and waterproofing materials applied on site must meet the VOC limits of California Air Resources Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings, and South Coast Air Quality Management District (SCAQMD), Rule 1168, effective July 1, 2005. Small containers of adhesives and sealants subject to state or federal consumer product VOC regulations are exempt.

Submit a list of all exterior applied materials and products used on site. Identify the regulatory VOC content, allowable VOC limit, and the total volume used on site for each product to determine whether 90% by volume has been achieved. The regulatory VOC content must be expressed as g/L less water and exempt solvents except for low-solids coatings, which show the content in g/L less exempt solvents.

The coatings listed on this page are formulated without the use of cadmium, or lead.

[^]Category classification based on CARB 2007 SCM definitions. [†]Refer to the current EDS for specific VOCs (calculated per 40 CFR 59.406). VOCs may vary by base and sheen.

LEED® v4.1 New Construction, Core and Shell, Schools, Healthcare, Hospitality
Contributes toward satisfying EQ CREDIT: INDOOR ENVIRONMENTAL
QUALITY- LOW-EMITTING MATERIALS 10/2021

updated 11/09/2021

PER USGBC LEED v4.1:

Intent

To reduce concentrations of chemical contaminants that can damage air quality and the environment, and to protect the health, productivity, and comfort of installers and building occupants.

Requirements

NC, CS, SCHOOLS, RETAIL, DATA CENTERS, WAREHOUSES & DISTRIBUTION CENTERS, HOSPITALITY, HEALTHCARE

Use materials on the building interior (everything within the waterproofing membrane) that meet the low emitting criteria below. Points are awarded according to Table 1:

Table 1. Points for low-emitting materials	
2 product categories	1 point
3 product categories	2 points
4 product categories	3 points
5 product categories	3 points + exemplary performance
Reach 90% threshold in at least three product categories	Exemplary performance or 1 additional point if only 2 points achieved above.

Product Category Calculations
Thresholds of compliance with emissions and content standards

Category	Threshold	Emissions and content requirements
Interior paints and coatings applied on site	<p>At least 75% of all paints and coatings, by volume or surface area meet the VOC emissions evaluation.</p> <p>AND</p> <p>100% meet for VOC content evaluation. To meet the 100% requirement for VOC content evaluation, a VOC budget may be used.</p> <p>The paints and coatings product category includes all interior paints and coatings wet applied on site.</p>	<p>• VOC Emissions Evaluation: Product has been tested according to California Department of Public Health (CDPH) Standard Method v1.2–2017</p> <p>• VOC content evaluation: Product meets the VOC content limits outlined in one of the applicable standards below. -California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings -South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016</p>

VOC Emissions Evaluation:

Product has been tested according to California Department of Public Health (CDPH) Standard Method v1.2–2017 and complies with the VOC limits in Table 4-1 of the method. Additionally, the range of total VOCs after 14 days (336 hours) was measured as specified in the CDPH Standard Method v1.2 and is reported (TVOC ranges: 0.5 mg/m³ or less, between 0.5 and 5 mg/m³, or 5 mg/m³ or more). Laboratories that conduct the tests must be accredited under ISO/IEC 17025 for the test methods they use. Products used in any setting other than schools and classrooms must be modeled to private office scenario. For schools projects, modeling to office and/or schools scenario is permitted.

The statement of product compliance must include the exposure scenario(s) used, the range of total VOCs, and must follow the product declaration guidelines in CDPH Standard Method v1.2–2017, Section 8. Manufacturer statements must also include a summary report from the laboratory that is less than three years old and the amount of wet-applied product applied in mass per surface area (if applicable). Organizations that certify manufacturers' claims must be accredited under ISO/IEC 17065.

VOC content evaluation:

Product meets the VOC content limits outlined in one of the applicable standards and for projects in North America, methylene chloride and perchloroethylene may not be intentionally added. Statement of product compliance must be made by the manufacturer or a USGBC-approved third-party. Any testing must follow the test method specified in the applicable regulation. If the applicable regulation requires subtraction of exempt compounds, any content of intentionally added exempt compounds larger than 1% weight by mass (total exempt compounds) must be disclosed.

• Paints and coatings:

- California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings
- South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016

Definitions:

µg/m³= Microgram per cubic meter

mg/m³= Milligram per cubic meter

1 µg/m³ = .001 Milligrams

interior wall and ceiling finish all the layers comprising the exposed interior surfaces of buildings, including fixed walls, fixed partitions, columns, exposed ceilings, and interior wainscoting, paneling, interior trim or other finish applied mechanically or for decoration, acoustical correction, surface fire resistance, or similar purposes.

building interior everything inside a structure's weatherproofing membrane

building exterior a structure's primary and secondary weatherproofing system, including waterproofing membranes and air- and water-resistant barrier materials, and all building elements outside that system

Category classification based on SCAQMD Rule 1113, February 5, 2016 and CARB 2007 SCM definitions.

Product Numbers link directly to their respective certificates for convenience.

Certificates can also be found on: greenguard.org or UL.com, spot.ul.com or on www.paintdocs.com

More on third party certifiers can be found here: <http://www.usgbc.org/resources/low-emitting-materials-third-party-certification-table>

The coatings listed on the opposite page are formulated without the use of methylene chloride, perchloroethylene, Cadmium or lead. **The products listed have been independently certified by UL Environment in accordance with “UL 2818 –GREENGUARD Certification Program for Chemical Emissions for Building Materials, Finishes and Furnishings,” and/or Standard referenced: CDPH/EHLB/Standard Method V1.2 (January 2017) “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers” (aka CA Section 01350). For more information, see <http://www.cdph.ca.gov>**

P,S,U= Primer, Sealer, Undercoater ^Category classification based on SCAQMD Rule 1113, Feb 5th, 2016 and CARB 2007 SCM definitions.

Per USGBC LEED v4.1:

Requirements:

Option 1. Environmental Product Declaration (EPD) (1 point)

Use at least 20 different permanently installed products sourced from at least five different manufacturers that meet one of the disclosure criteria below. (10 different permanently installed products from three different manufacturers for CS and Warehouses & Distribution Centers)

Environmental Product Declarations which conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.

- **Product-specific Type III EPD -- Products with third-party certification (Type III), including external verification and external critical review in which the manufacturer is explicitly recognized as the participant by the program operator are valued as 1.5 products for the purposes of credit achievement calculation.**

The above EPDs were independently verified by NSF International in accordance with ISO 21930 and ISO 14025, by NSF International ncss@nsf.org.

Certificates can be found on: <http://info.nsf.org/Certified/Sustain/listings.asp?ProdCat=EPD> or www.paintdocs.com This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by NSF International ncss@nsf.org

*Methodology based on Cradle to Cradle Certified™ Product Material Health Assessment Methodology v3.0

Per USGBC LEED v4.1:

Intent

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products for which the chemical ingredients in the product are inventoried using an accepted methodology and for selecting products verified to minimize the use and generation of harmful substances. To reward raw material manufacturers who produce products verified to have improved life-cycle impacts.

Requirements:

NC, CS, SCHOOLS, RETAIL NC, DATA CENTERS, WAREHOUSES & DISTRIBUTION CENTERS, HOSPITALITY NC, HEALTHCARE

Option 1. Material Ingredient Reporting (1 point)

Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm).

- Manufacturer Inventory
- Health Product Declaration.
- Cradle to Cradle.
- Declare.
- [Product Lens Certification.](#)

[Any compliant reports above with third-party verification that includes the verification of content inventory are worth 1.5 products for credit achievement calculations.](#)

UL's Product Lens Certification is an ingredient disclosure tool that provides hazard information in context, fulfilling the new demands for product transparency.

The Product Lens certification is a result of collaboration between UL Environment, MBDC and Cradle to Cradle Product Innovation Institute, with UL basing the program's chemical assessment on the Materials Health Assessment Methodology from the Cradle to Cradle Certified™ Products program. The tool was developed in partnership with MBDC to meet and exceed the chemical disclosure requirements outlined by the design community and LEED®. With the program harmonized at the assessment level, manufacturers are able to progress further into the Cradle to Cradle certification programs as they desire.

Product Lens has been designed to meet credit requirements in LEED v4 for chemical disclosure (MR Credit: Building Product Disclosure and Optimization – Material Ingredients). All information is verified by UL, helping manufacturers address the skepticism inherent in self-disclosure, and signaling trust and legitimacy to specifiers and purchasers.

Certificates can be found on: <https://spot.ul.com/>

Per USGBC LEED v4.1:

Requirements:

NC, CS, SCHOOLS, RETAIL NC, DATA CENTERS, WAREHOUSES & DISTRIBUTION CENTERS, HOSPITALITY NC, HEALTHCARE

Option 1. Material Ingredient Reporting (1 point)

Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm).

- **Manufacturer Inventory**
- Health Product Declaration, Cradle to Cradle, Declare.
- Product Lens Certification. USGBC approved program

Manufacturer Inventory. The manufacturer has published complete content inventory for the product following these guidelines:

A publicly available inventory of all ingredients identified by name and Chemical Abstract Service Registration Number (CASRN) and/or European Community Number (EC Number).

Materials defined as trade secret or intellectual property may withhold the name and/or CASRN/EC Number but must disclose ingredient/chemical role, amount and hazard score/class using either:

The Globally Harmonized System of Classification and Labeling of Chemicals rev.6 (2015) (GHS)

- The hazard screen must be applied to each trade secret ingredient and the inventory lists the hazard category for each of the health hazards included in Part 3 of GHS (e.g. "GHS Category 2 Carcinogen").

Any compliant reports above with third-party verification that includes the verification of content inventory are worth 1.5 products for credit achievement calculations.

Certificates can be found on: <http://info.nsf.org/Certified/sustain/listings.asp?Standard=LEED41&Company=C0261406>

P,S,U= Primer, Sealer, Undercoater ^Category classification based on SCAQMD Rule 1113, February 5, 2016 and CARB 2007 SCM definitions.

†Refer to the current EDS for specific VOCs (calculated per 40 CFR 59.406). VOCs may vary by base and sheen.

Per USGBC LEED v4.1:

Intent

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products for which the chemical ingredients in the product are inventoried using an accepted methodology and for selecting products verified to minimize the use and generation of harmful substances. To reward raw material manufacturers who produce products verified to have improved life-cycle impacts.

Requirements:

NC, CS, SCHOOLS, RETAIL, DATA CENTERS, WAREHOUSES & DISTRIBUTION CENTERS, HOSPITALITY, HEALTHCARE

Option 2: Material Ingredient Optimization (1 point)

Use products that have a compliant material ingredient report or action plan. Use at least 5 permanently installed products sourced from at least three different manufacturers.

Material Ingredient Screening and Optimization Action Plan (value at 50% by cost or ½ product)

Action Plan based on publicly available material inventory to at least 1,000ppm.

The Material Ingredient Screening and Optimization Action Plans above were independently verified by NSF International in accordance with ISO 21930 and ISO 14025, by NSF International ncss@nsf.org. Certificates can be found on: <http://info.nsf.org/Certified/Sustain/listings.asp?CompanyName=she&ProductName=&StdExt=&Standard=LEED41&search=Search>

†Refer to the current EDS for specific VOCs (calculated per 40 CFR 59.406). VOCs may vary by base and sheen.

Standard method for the testing and evaluation of volatile organic chemical emissions from indoor sources using environmental chambers version 1.2 This credit requires products to be tested in accordance with the California Department of Health Services (CDPH) V1.2-2017. Section 6 of the CDPH Standard Practice defines the provision required for "REQUIRED ELEMENTS OF THE LABORATORY TEST REPORT".

The products listed above have been independently certified by UL Environment in accordance with "UL 2818 –GREENGUARD Certification Program for Chemical Emissions for Building Materials, Finishes and Furnishings," and/or Standard referenced: CDPH/EHLB/Standard Method V1.2 (January 2017) "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers" (aka CA Section 01350). For more information, see <http://www.cdph.ca.gov> GREENGUARD Certified products are certified to UL GREENGUARD standards for low chemical emissions into indoor air during product usage. For more information, visit [ul.com](http://www.ul.com). Certificates can be found on: spot.ul.com or www.paintdocs.com

CDPH Emissions Test Method:

Standard referenced: CDPH/EHLB/Standard Method V1.2 (January 2017) “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers” (aka CA Section 01350).

Per USGBC LEED v4.1: MR Intent:

Option 1. Material Ingredient Reporting (1 point)

Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm).

- **Manufacturer Inventory**
- Health Product Declaration.
- Cradle to Cradle.
- Declare.
- Product Lens Certification.
- USGBC approved program

Manufacturer Inventory. The manufacturer has published complete content inventory for the product following these guidelines:

A publicly available inventory of all ingredients identified by name and Chemical Abstract Service Registration Number (CASRN) and/or European Community Number (EC Number). Materials defined as trade secret or intellectual property may withhold the name and/or CASRN/EC Number but must disclose ingredient/chemical role, amount and hazard score/class using either:

The Globally Harmonized System of Classification and Labeling of Chemicals rev.6 (2015) (GHS)

- The hazard screen must be applied to each trade secret ingredient and the inventory lists the hazard category for each of the health hazards included in Part 3 of GHS (e.g. “GHS Category 2 Carcinogen”).

Any compliant reports above with third-party verification that includes the verification of content inventory are worth 1.5 products for credit achievement calculations.

What's changed for paints & coatings in LEED® v4.1?

LEED® v4.1 still addresses VOCs, Emissions and Material Transparency, yet is evolving to reward products that continuously improve. Sherwin-Williams paints and coatings may help contribute points towards LEED® v4.1 in three categories — Environmental Quality Credits, Materials and Resources Credits and Pilot Credit.

LEED® v4.1 Points Summary

EQ Credit (Emissions) 3+ Points Low-Emitting Materials

Earn up to 3 points with other eligible products + exemplary performance (Reach 90% threshold in at least 3 product categories)
Points are earned by "bundling" or combining compliant products from 2 or more categories.

- **Paints and Coatings**
 - » At least 75% of all paints and coatings, by volume or surface area, meet the VOC emissions evaluation.
 - » AND 100% meet the VOC content evaluation.
- **Adhesives and Sealants**
 - » At least 75% of all adhesives and sealants, by volume or surface area, meet the VOC emissions evaluation.
 - » AND 100% meet the VOC content evaluation.
- **Flooring**
 - » At least 90% of all flooring, by cost or surface area, meets the VOC emissions evaluation.
- **Ceilings**
- **Wall panels**
- **Composite wood**
- **Insulation**
- **Furniture**

MR Credit (Transparency) 2 Points Environmental Product Declaration

Achieve one or more of the options below for a maximum of 2 points.

Option 1 – Environmental Product Declarations (EPD) (1 Point)

- Earn 1 point by using at least 20 permanently installed products from 5+ manufacturers.
- Product-Specific Type III EPD: Third-Party certified EPD through NSF International are valued as 1.5 products.

Option 2 – Embodied Carbon/LCA Optimization Action Plan (1 point)

- LCA Optimization Action Plan (value at 50% by cost or 1/2 product) Third-Party certification through NSF
- Life Cycle Impact Reductions in Embodied Carbon.

MR Credit (Transparency) 2 Points Material Ingredients

Achieve one or more of the options below for a maximum of 2 points.

Option 1 – Material Ingredient Reporting (1 point)

- Use at least 20 different permanently installed products from at least five different manufacturers.
 - » Manufacturer's Inventory Product Declaration-Third-Party NSF Certification is worth 1.5 products
 - » Product Lens Certification-Third-Party Certification UL/GREENGUARD (Product Lens Assessment (PLA)) is worth 1.5 products.

Option 2 – Material Ingredient Optimization (1 point)

- Use permanently installed products from at least three different manufacturers that document their material ingredient optimization. Choose 10 compliant products.
 - » Material Ingredient Screening and Optimization Action Plan (value at 50% by cost of 1/2 product). certified through NSF

Pilot Credit 1 Point Integrated Analysis of Building Materials (IABM)

At least 3 permanently installed products with documented:

- Life-cycle analysis
- Health, Safety and Environment results certified by third parties

Opportunities to contribute towards LEED® v4.1 points

Earn up to 3 points + exemplary performance

(Reach 90% threshold in at least 3 product categories) of the EQ Credit:

The first option to earn points for Low-Emitting materials includes multiple categories of materials. Compliant products must meet emissions and VOC content standards to contribute to points. Points are earned by “bundling” or combining compliant products from 2 or more categories.

Product categories include:

- Interior paint and coatings
- Interior adhesives and sealants
- Ceilings
- Wall panels
- Flooring
- Composite wood
- Insulation
- Furniture

VOC emissions evaluation

Option 1. Product has been tested according to California Department of Public Health (CDPH) Standard Method v1.2–2017.

VOC content evaluation

Paints and coatings: Product meets the VOC content limits outlined in one of the applicable standards

- California Air Resource Board (CARB) 2007 Suggested Control Measure (SCM) for Architectural Coatings
- South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016

Adhesives and sealants

- SCAQMD Rule 1168, October 6, 2017

Sherwin-Williams products with GREENGUARD Gold Certification can contribute to the EQ Credit.

Help contribute up to 4 points for two categories of the MR Credit:

Building Product Disclosure & Optimization

MR Credit (Transparency) 2 Points Environmental Product Declaration

Achieve one or more of the options below for a maximum of 2 points.

Option 1 – EPD

Earn 1 point for EPD when using at least 20 different permanently installed products from at least 5 different manufacturers.

- Product-Specific Type III EPD: Third-Party certified EPD through NSF International are valued as 1.5 products.
 - » Products with third-party certification (Type III), including external verification and external critical review in which the manufacturer is explicitly recognized as the participant by the program operator, are valued as 1.5 products for the purposes of credit achievement calculation.

Sherwin-Williams products with an NSF International certified third-party certification EPD are valued as 1.5 products.

Option 2 – Embodied Carbon/LCA Optimization Action Plan (1 point)

Use products that comply with one of the criteria below for 10%, by cost, of the total value of permanently installed products in the project, or use at least 10 permanently installed products sourced from at least three different manufacturers.

- LCA Optimization Action Plan (value at 50% by cost or 1/2 product). certified through NSF

MR Credit (Transparency) 2 Points Material Ingredients

Achieve one or more of the options below for a maximum of 2 points.

Option 1 – Material Ingredient Reporting (1 point)

- Use at least 20 different permanently installed products from at least five different manufacturers.
 - » Manufacturer's Inventory Product Declaration-NSF certification
 - » Cradle to Cradle
 - » Declare
 - » Health Product Declaration
 - » Product Lens Certification-Third-Party Certification UL/GREENGUARD (Product Lens Assessment (PLA))

-Any compliant reports above with third-party verification that includes the verification of content inventory are worth 1.5 products for credit achievement calculations.

Sherwin-Williams products with NSF Manufacturer's Inventory certification or UL Product Lens certification can contribute towards this credit and are valued as 1.5 products.

AND/OR Option 2 – Material Ingredient Optimization (1 point)

Use permanently installed products from at least three different manufacturers that document their material ingredient optimization using the paths below. Choose 10 compliant products.

- Material Ingredient Screening and Optimization Action Plan (value at 50% by cost or 1/2 product). certified through NSF

Opportunities to contribute towards LEED® v4.1 points cont.

Pilot Credit:

Earn 1 point for LEED® v4.1 Integrated Analysis of Building Materials

Pilot Credit 1 Point

Integrated Analysis of Building Materials (IABM)

New construction, core and shell, schools, healthcare and hospitality that use products and materials for which life cycle information is available and have environmentally, economically and socially preferable life-cycle impacts can earn 1 point.

Requirements are:

- Use 3+ different permanently installed products that have a documented qualitative analysis of the potential health, safety and environmental impacts of the product in five stages of the product's life cycle.
- Include verified quantitative information.
 - » Environmental Product Declarations (EPD), Life-Cycle Assessments (LCA), ecolabels, standards

Sherwin-Williams products with an NSF International certified EPD, LCA and emissions testing, material disclosure (third-party UL Product Lens certification), and safety assessment.

Visit [swspecs.com](https://www.swspecs.com) to view Sherwin-Williams' Sustainable Programs Reference Guide for specific products that can help contribute towards earning LEED® v4 & v4.1 points in each category. Or call 1-800-524-5979 to have a Sherwin-Williams representative contact you.

What's changed for paints & coatings from LEED® v2009 to LEED® v4?

LEED® v2009 mainly addressed VOCs. Now, LEED® v4 addresses VOCs, Emissions and Material Transparency. Sherwin-Williams paints and coatings may help contribute points towards LEED® v4 in three categories – Environmental Quality Credit, Materials and Resources Credit and Pilot Credit.

LEED® v4 Points Summary

EQ Credit (Emissions) 3 Points

- Earn up to 3 points with other eligible products

MR Credit (Transparency) 2 Points

Environmental Product Declarations (EPD)

- Earn 1 point by using at least 20 permanently installed products from 5+ manufacturers
- 3rd party certified EPD through NSF International

Material Ingredients

- Earn 1 point by using at least 20 permanently installed products from 5+ manufacturers
- Product Lens™, a USGBC Approved Program in Material Ingredient Reporting

Pilot Credit 1 Point

- Integrated Analysis of Building Materials
- At least 3 permanently installed products with documented:
 - » Life-cycle analysis
 - » Health, Safety and Environment results certified by 3rd parties

Visit swspecs.com to view Sherwin-Williams' Green Programs Reference Guide for specific products that can help contribute towards earning LEED® v4 points in each category.

Four opportunities to contribute towards LEED® v4 points

Earn up to 3 points of the EQ Credit:

The first option to earn points for Low-Emitting materials includes 6 categories of materials – 7 when counting exterior paints and coatings for healthcare and schools only. Compliant products must meet VOC emission and content standards to contribute to points. Points are earned by “bundling” or combining compliant products from 2 or more categories.

Product categories include:

- Interior paint and coatings
- Interior adhesives and sealants
- Flooring
- Composite wood
- Insulation
- Furniture

The second option to earn points is the Budget Calculation Method. This can be used if some products in a category don't meet the criteria. Points are based on the total % of the surface area painted with compliant products:

- $\geq 50\%$ to $\leq 70\%$ will earn 1 point
- $\geq 70\%$ to $\leq 90\%$ will earn 2 points
- $\geq 90\%$ will earn 3 points

 Sherwin-Williams products with GREENGUARD Gold Certification can contribute to the EQ Credit

= 1 Point

= 2 Points

= 3 Points

Contribute up to 2 points for two categories of the MR Credit: Building Product Disclosure & Optimization

EPD: Earn 1 point for EPD when using at least **20** different permanently installed products from at least **5 different** manufacturers.

- Certified through a 3rd party such as NSF International

 Sherwin-Williams products with an NSF International certified EPD can contribute towards this credit

Material Ingredients: Earn 1 point for Material Ingredients when using at least **20** different permanently installed products from at least **5 different** manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm).

- Manufacturer inventory
- Health product declaration
- Cradle to Cradle v2 Basic level or Cradle to Cradle v3 Bronze level
- Declare product label
- Cradle to Cradle Material Health Certificate
- USGBC approved program such as UL Product Lens™

 Sherwin-Williams products with UL Product Lens certification can contribute towards this credit

Pilot Credit: Earn 1 point for LEED® v4 Integrated Analysis of Building Materials

New construction, core and shell, schools, healthcare and hospitality that use products and materials for which life cycle information is available and have environmentally, economically and socially preferable life-cycle impacts can earn 1 point.

Requirements are:

- Use 3+ different permanently installed products that have a documented qualitative analysis of the potential health, safety and environmental impacts of the product in five stages of the product's life cycle
- Include verified quantitative information
 - » Environmental Product Declarations (EPDs), Life-Cycle Assessments (LCAs), ecolabels, standards

 Sherwin-Williams products with an NSF International certified EPD, LCA and emissions testing, material disclosure (3rd party UL Product Lens certification), and safety assessment

Visit swwspecs.com to view Sherwin-Williams' Green Programs Reference Guide for specific products that can help contribute towards earning LEED® v4 points in each category.

LEED® and Other Building Rating Systems Form Instructions

To complete this form:

- Open the document in Adobe Acrobat Reader and select the Fill & Sign option in the right hand column
- Use the Fill & Sign toolbar to add text, check boxes or select answers

Rely on Sherwin-Williams for products that help contribute to LEED® and other building rating systems.

Environmental Quality (EQ)

Low Emitting Materials:

- Sherwin-Williams Paint, Caulking or Flooring with UL GREENGUARD® Gold or CDPH V1.2-2017 validated can help contribute

Materials and Resources (MR)

Environmental Product Declarations (EPD):

- Sherwin-Williams EPD Product Specific Type III with 3rd party NSF® International validated can help contribute

Material Ingredients Disclosure:

- Sherwin-Williams products with 3rd party UL Product Lens® (PLA) validated can help contribute
- Sherwin-Williams products with 3rd party NSF® International Manufacturer Inventory validated can help contribute

Pilot Credit

Integrated Analysis of Building Materials (IABM):

- Choose Sherwin-Williams products with an 3rd party NSF International certified EPD, LCA and emissions testing, material disclosure (3rd party UL Product Lens certification) or Manufacturer Inventory and safety assessment

Term	Definition
Advanced Resin Technology	Formulated for outstanding adhesion and hide.
Anti-microbial agents	Product contains agents which inhibit the growth of mold and mildew on the surface of this paint film.
ClimateFlex Technology™	Provides exceptional early moisture resistance and smooth application and appearance at extreme temperatures (application at 35°F-120°F (1.7°C - 48.8°C) air, surface and material temperatures).
ColorCast Ecotoner® Colorants	When tinted with ColorCast Ecotoner® Colorants, VOCs (Volatile Organic Compounds) will not be added to any Sherwin-Williams product.
Extreme Temp Technology™	Can be applied from 35°F–120°F air, surface and material temperatures.
ISO 9001	As tested by Sherwin-Williams ISO 9001 certified labs based on ASTM® standards, as applicable, or other generally accepted industry standards.
Mildew resistant	Coating contains agents which inhibit the growth of mildew on the surface of this paint film.
MoistureGuard™ Technology	Resisting moisture twice as quickly as standard exterior latex coatings.
Moisture Resistant Technology	Offering quick return to service (as little as two hours) and durability in moist environments like bathrooms.
Odor Block Technology	Allows odors to be blocked in the first coat. Measured by using precision instruments for quantifying odor strength in the ambient air
Self-Cleaning Technology™	Formulated to be self-cleaning by shedding dirt upon rain or water contact.
Stain Locking Technology	Allows stains to be trapped in the first coat, allowing the finish coat to be uniform in appearance without unsightly stain bleed through.
SuperDeck® Cool Feel™ Technology	Helps reduce the surface temperature by up to 20°F when compared to conventional color technology.
¹ SuperPaint® Air Purifying Technology	Helps reduce volatile organic compounds (VOCs) from potential sources like carpet, cabinets and fabrics. Odor eliminating technology helps reduce common household odors like cooking, smoking and pets. The length of time SuperPaint Air Purifying Technology actively reduces odors and formaldehyde depends on the concentration, the frequency of exposure and the amount of painted surface area.
² SuperPaint® with Sanitizing Technology	Is an EPA-registered sanitizing paint that kills 99.9% of Staph (Staphylococcus aureus), MRSA (Methicillin-resistant Staphylococcus aureus), E. coli (Escherichia coli), VRE (Vancomycin-resistant Enterococcus faecalis) and Enterobacter aerogenes within two hours of exposure on painted surfaces. It continues to kill 90% of these bacteria even after repeated contamination on painted surfaces. The effectiveness lasts for up to four years as long as the integrity of the surface is maintained.
³ Loxon Self-Cleaning Acrylic Technology™	Formulated to be self-cleaning by shedding dirt upon rain or water contact.
UL GREENGUARD® Gold	Certified to UL GREENGUARD® Gold standards for low chemical emissions into indoor air during product usage. To learn more, see spot.ul.com
VinylSafe®	VinylSafe® paint colors allow you the freedom to choose from 100 color options, including a limited selection of darker colors formulated to resist warping or buckling when applied to sound, stable vinyl siding.
