SuperPaint Interior Latex Satin
A87W01150 Hi-Ref White
A87W01151 Extra White
A87W01153 Deep Base
A87T01154 Ultradeep Base

101.11a

**SPECIFICATIONS**

SuperPaint Interior Latex can be used directly over existing coatings, or bare drywall, plaster (cured with a pH of less than 9), masonry (cured with a pH of less than 9) and non-bleeding wood.

**Drywall**
- Self-prime using 2 cts. of SuperPaint Interior Latex
- 1 ct. Premium Wall & Wood Primer
- 2 cts. SuperPaint Interior Latex

**Masonry / Block**
- (can be filled to provide a smooth surface or primed if it is a high pH substrate)
- 1 ct. Loxon Block Surfacer
- 1 ct. Loxon Concrete & Masonry Primer
- 2 cts. SuperPaint Interior Latex

**Plaster**
- Self-prime using 2 cts. of SuperPaint Interior Latex
- 1 ct. Premium Wall & Wood Primer
- 2 cts. SuperPaint Interior Latex

**Wood**
- Self-prime using 2 cts. of SuperPaint Interior Latex
- 1 ct. Premium Wall & Wood Primer
- 2 cts. SuperPaint Interior Latex
- If the wood has bleeding (such as tannin or knot-holes), prime with Multi-Surface Primer.
- Other primers may be appropriate.

When repainting involves a drastic color change, a coat of primer will improve the hiding performance of the topcoat color.

**SURFACE PREPARATION**

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer/sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

**Drywall**
- Fill cracks and holes with patching paste/spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.

**Masonry, Concrete, Cement, Block**
- All new surfaces must be cured according to the supplier’s recommendations—usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with Loxon Concrete & Masonry Primer.
### SURFACE PREPARATION

**Plaster**
Bare plaster must be cured and hard. Textured, soft, porous, or powdery plaster should be treated with a solution of 1 pint household vinegar to 1 gallon of water. Repeat until the surface is hard, rinse with clear water and allow to dry.

**Wood**
Sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth.

**Mildew**
Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

**Caulking**
Gaps between walls, ceilings, crown moldings, and other interior trim can be filled with the appropriate caulk after priming the surface.

### APPLICATION

| **Brush** | Use a nylon/polyester brush. |
| **Roller** | Use a 3/8" - 3/4" nap synthetic cover. |
| **Spray—Airless** | Pressure: 2000 psi, Tip: .017"-.021" |

### CLEANUP INFORMATION

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.

### CAUTIONS

- For interior use only.
- Protect from freezing.
- Non-photochemically reactive.

Before using, carefully read **CAUTIONS** on label.
