SIMPSO Strong-Tie

**Restoration** Solutions

- on laboratory testing. Onsite testing shall be performed for verification of capacity since base material quality can vary widely. 2. Ultimate load is average load at failure
- of the base material. Heli-Tie fastener average ultimate steel strength is 3,885 lb. and does not govern.
- 3. Load at maximum permitted displacement is average load at displacement of 0.157 inches (4 mm). The designer shall apply a suitable factor of safety to these numbers to derive allowable service loads.
- 4. Solid brick values for nominal 4-inchwide solid brick conforming to ASTM C62/C216, Grade SW. Type N mortar is prepared in accordance with IBC Section 2103.2.
- Hollow brick values for nominal 4-inchwide hollow brick conforming to ASTM C216/C652, Grade SW, Type HBS, Class H40V. Mortar is prepared in accordance with IBC Section 2103.2.
- 6. Grout-filled CMU values for nominal 8-inch-wide lightweight, mediumweight and normal-weight concrete masonry units. The masonry units must be fully grouted. Values for nominal 8-inch-wide concrete masonry units (CMU) with a minimum specified compressive strength of masonry, f'm, at 28 days is 1,500 psi
- 7. Hollow CMU values for 8-inch-wide lightweight, medium-weight and normal-weight concrete masonry units.
- 8. Normal-weight concrete values for concrete with minimum specified compressive strength of 2,500 psi.
- 9. 2x4 wood stud values for nominal 2x4 Spruce-Pine-Fir.
- 10. Metal stud values for 20-gauge C-shape metal stud.
- 11. For retrofits, due to difficulty of locating center of 2x4 or metal stud flange, install Heli-Tie from interior of building.
- 12. For new construction, anchor one end of tie into backup material. Embed other end into veneer mortar joint.

## Heli-Tie<sup>™</sup> Design Information

## Compression (Buckling) Loads<sup>1</sup>

Size in. (mm)	Unsupported Length in. (mm)	Ultimate Compression Load¹ Ib. (kN)
	<b>1</b> (25)	<b>1,905</b> (8.5)
3%8	<b>2</b> (50)	<b>1,310</b> (5.8)
(9.0)	<b>4</b> (100)	<b>980</b> (4.4)
	<b>6</b> (150)	<b>785</b> (3.5)

1. The designer shall apply a suitable factor of safety to these numbers to derive allowable service loads.

### Heli-Tie Fastener Installation Tool – Model HELITOOL37A

Required for correct installation of Heli-Tie wall ties. Speeds up installation and automatically countersinks the tie into the façade material.

HELITOOL37A

#### Heli-Tie Wall Tie Tension Tester – Model HELITEST37A

Recommended equipment for onsite testing to accurately determine load values in any specific structure, the Heli-Tie wall tie tension tester features a key specifically designed to grip the Heli-Tie fastener and provide accurate results. Replacement test keys sold separately (Model HELIKEY37A).

Contact Simpson Strong-Tie for Heli-Tie onsite testing procedures.
