A high-strength screw anchor for use in cracked and uncracked concrete, as well as uncracked masonry. The Titen HD offers low installation torque and outstanding performance. The Titen HD screw anchor is designed for a wide variety of applications such as sill plates, ledgers, post bases, seating, and other holdown applications. The screw anchor is easy to remove when used in temporary applications such as bracing and formwork, or when a fixture needs to be relocated.

## Features

- Tested in accordance with $\mathrm{ACI} 355.2, \mathrm{AC} 193$ and AC 106
- Qualified for static, wind and seismic loading conditions
- Thread design undercuts to efficiently transfer the load to the base material
- Standard fractional sizes
- Specialized heat-treating process creates tip hardness for better cutting without compromising the ductility
- No special drill bit required - designed to install using standard-sized ANSI tolerance drill bits
- Hex-washer head requires no separate washer, unless required by code, and provides a clean installed appearance
- Removable - ideal for temporary anchoring (e.g. formwork, bracing) or applications where fixtures may need to be moved
- Use in dry interior environments only

Codes: ICC-ES ESR-2713 (concrete);
ICC-ES ESR-1056 (masonry);
City of LA Supplement within ESR-2713 (concrete);
City of LA Supplement within ESR-1056 (masonry);
Florida FL15730 (concrete and masonry);
FM 3017082, 3035761 and 3043442;
Multiple DOT listings
Material: Carbon steel
Coating: Zinc plated

## Installation

$!$
Holes in steel fixtures to be mounted should match the diameter specified in the table below.
Use a Titen HD screw anchor one time only - installing the anchor multiple
times may result in excessive thread wear and reduce load capacity.
$!$ Do not use impact wrenches to install into hollow CMU.
1 Caution: Oversized holes in base material will reduce or eliminate the mechanical interlock of the threads with the base material and reduce the anchor's load capacity.

1. Drill a hole in the base material using a carbide drill bit the same diameter as the nominal diameter of the anchor to be installed. Drill the hole to the specified embedment depth plus minimum hole depth overdrill (see table below) to allow the thread tapping dust to settle, and blow it clean using compressed air. (Overhead installations need not be blown clean.) Alternatively, drill the hole deep enough to accommodate embedment depth and the dust from drilling and tapping.
2. Insert the anchor through the fixture and into the hole.
3. Tighten the anchor into the base material until the hex-washer head contacts the fixture.

Additional Installation Information

| Titen HD <br> Diameter <br> (in.) | Wrench <br> Size <br> (in.) | Recommended <br> Stee Fixture Hole Size <br> (in.) | Minimum Hole <br> Depth Overdrill <br> (in.) |
| :---: | :---: | :---: | :---: |
| $1 / 4$ | $3 / 8$ | $3 / 8$ to $7 / 16$ | $1 / 8$ |
| $3 / 8$ | $9 / 16$ | $1 / 2$ to $9 / 16$ | $1 / 4$ |
| $1 / 2$ | $3 / 4$ | $5 / 8$ to $11 / 16$ | $1 / 2$ |

| $3 / 4$ | $11 / 8$ | $7 / 8$ to $15 / 16$ | $1 / 2$ |

[^0]

Serrated teeth on the tip of the Titen HD screw anchor facilitate cutting and reduce installation torque.

## Countersunk Head Style

The countersunk head style is for applications that require a flush-mount profile. Countersinking also leaves a cleaner surface appearance for exposed through-set applications. The anchor head's 6 -lobe drive eases installation and is less prone to stripping than traditional recessed anchor heads.

## Features

- Available in many standard lengths in $1 / 4$ " and $3 / 8^{\prime \prime}$ diameters
- Driver bit included in each box

Codes: ICC-ES ESR-2713 (concrete);
ICC-ES ESR-1056 (masonry);
City of LA Supplement within ESR-2713 (concrete); City of LA Supplement within ESR-1056 (masonry); Florida FL15730 (concrete and masonry)

Material: Carbon steel
Coating: Zinc plated

Additional Installation Information

| Titen HD <br> Diameter <br> (in.) | Bit <br> Size | Recommended <br> Steel Fixture Hole Size <br> (in.) | Minimum Hole <br> Depth Overdrill <br> (in.) |
| :---: | :---: | :---: | :---: |
| $1 / 4$ | $T 30$ | $3 / 8$ to $7 / 16$ | $1 / 8$ |
| $3 / 8$ | $T 50$ | $1 / 2$ to 916 | $1 / 4$ |

Suggested fixture hole sizes are for structural steel thicker than 12 gauge only. Larger holes are not required for wood or thinner cold-formed steel members.

Titen HD Countersunk Head Style

6-lobe drive

$1 / 4^{1 "}$

## Washer-Head Head Style

The washer-head design is commonly used where a minimal head profile is necessary. The model is offered in sizes suitable for use in sill plate applications, and the washer head's low installed profile means modular wall and floor systems can be installed on top with no need for notching the wall framing to accommodate the anchor. The anchor's 6-lobe drive eases driving and seating without stripping.

## Features

- Available in many standard lengths in $1 / 2^{\prime \prime}$ and $5 / 8^{\prime \prime}$ diameters
- Driver bit included in each box

## Hex Head Mechanically Galvanized

The Titen HD heavy-duty screw anchor is a mechanically galvanized high-strength screw anchor for use in cracked and uncracked concrete, as well as uncracked masonry. Its proprietary heat treatment and ASTM B695 Class 65 mechanically galvanized coating make it ideal for both interior and exterior anchoring applications.

The Titen HD screw anchor is designed for a wide variety of applications such as sill plates, ledgers, post bases, seating, and other holdown applications. The screw anchor is easy to remove for use in temporary applications such as bracing and formwork, or when a fixture needs to be relocated.

## Features

- Thread design undercuts to efficiently transfer the load to the base material
- Standard fractional sizes, hole size equals anchor size
- Specialized heat-treating process creates tip hardness for better cutting without compromising ductility
- Hex washer head requires no separate washer, unless required by code
- Fully and easily removable
- Code listed for exterior applications

Codes: ICC-ES ESR-2713 (concrete);

| Steel Strength in Shear，Seismic | $V_{\text {sa，deck，eq }}$ | lb ． | 870 | 1，135 | 1，434 | 1，533 | 1，565 | 2，846 | 1，305 | 1，575 | 2，676 | 4，591 |

1．The information presented in this table is to be used in conjunction with the design criteria of ACl 318 －19 Chapter 17， ACl 318 －14 Chapter 17 and ACl 318－11 Appendix D ，except as modified below．
2．Concrete compressive strength shall be 3,000 psi minimum．The characteristic pullout resistance for greater compressive strengths shall be increased by multiplying the tabular value by $\left(f_{c, \text { specified }}^{\prime} / 3,000\right)^{0.5}$ ．
3．For anchors installed in the soffit of sand－lightweight or normal－weight concrete over steel deck floor and roof assemblies， as shown in Figure 1 and Figure 2，calculation of the concrete breakout strength may be omitted．
4．In accordance with ACl 318 －19 Section 17．6．3．2．1， ACl 318 －14 Section 17．4．3．2 or ACl 318－11 Section D．5．3．2，the nominal pullout strength in cracked concrete for anchors installed in the soffit of sand－lightweight or normal－weight concrete over steel deck floor and roof assemblies $N_{p, \text { deck，cr }}$ shall be substituted for $N_{p, c r}$ ．Where analysis indicates no cracking at service loads，the normal pullout strength in uncracked concrete $N_{p, \text { deck，uncr }}$ shall be substituted for $N_{p, \text { uncr }}$ ．
5．In accordance with ACl 318 －19 Section 17．7．1．2（c）， ACl 318 －14 Section 17．5．1．2（c）or ACl 318 －11 Section D．6．1．2（c），the shear strength for anchors installed in the soffit of sand－lightweight or normal－weight concrete over steel deck floor and roof assemblies $V_{\text {sa，deck }}$ and $V_{\text {sa，deck，eq }}$ shall be substituted for $V_{\text {sa }}$ ．
6．Minimum edge distance to edge of panel is $2 h_{e f}$ ．
7．The minimum anchor spacing along the flute must be the greater of $3 h_{e f}$ ，or 1.5 times the flute width．

Titen HD Anchor Tension and Shear Strength Design Data in the Topside of Normal-Weight Concrete or Sand-Lightweight Concrete over Steel Deck¹,2,3,4

IBC $\rightarrow \rightarrow{ }^{4}$

| Design Information | Symbol | Units | Nominal Anchor Diameter, $\mathrm{d}_{\mathrm{a}}$ (in.) |  |  |  |

|  |  |  | Figure 3 |  |  |  |
|  |  |  | $1 / 4$ | $3 / 8$ | 1/2 |  |
| Nominal Embedment Depth | $h_{\text {nom }}$ | in. | 15/8 | $21 / 2$ | 3114 | 4 |
| Effective Embedment Depth | $h_{\text {ef }}$ | in. | 1.19 | 1.77 | 2.35 | 2.99 |
| Minimum Concrete Thickness ${ }^{5}$ | $h_{\text {min,deck }}$ | in. | 21/2 | $31 / 4$ | $41 / 2$ | $41 / 2$ |
| Critical Edge Distance | $C_{\text {ac, deck,top }}$ | in. | $33 / 4$ | $71 / 4$ | 9 | 9 |
| Minimum Edge Distance | $C_{\text {min,deck,top }}$ | in. | $31 / 2$ | 3 | $21 / 2$ | $21 / 2$ |
| Minimum Spacing | $S_{\text {min,deck,top }}$ | in. | $31 / 2$ | 3 | 3 | 3 |

1. For anchors installed in the topside of concrete-filled deck assemblies, as shown in Figure 3, the nominal concrete breakout strength of a single anchor or group of anchors in shear, $V_{c b}$ or $V_{c b g}$, respectively, must be calculated in accordance with ACI 318-19 Section 17.7.2, ACl 318-14 Section 17.5.2 or ACl 318-11 Section D.6.2, using the actual member thickness, $h_{\text {min }, \text { deck, }}$, in the determination of $A_{v c}$.
2. Design capacity shall be based on calculations according to values in the tables featured on pp. 69 and 70.
3. Minimum flute depth (distance from top of flute to bottom of flute) is $1 \frac{1}{2} 2^{\prime \prime}$ (see Figure 3 ).
4. Steel deck thickness shall be minimum 20 gauge.
5. Minimum concrete thickness ( $h_{\text {min, deck }}$ ) refers to concrete thickness above upper flute (see Figure 3).

Figure 1. Installation of $3 / 8$ "- and $1 / 2$ "-Diameter Anchors in the Soffit of Concrete over Steel Deck

1. The tabulated allowable loads are based on a safety factor of 5.0 for installations under the IBC and IRC.
2. Values for 8 "-wide, lightweight, medium-weight and normal-weight concrete masonry units.
3. The masonry units must be fully grouted.
4. The minimum specified compressive strength of masonry, $f^{\prime} m$, at 28 days is 1,500 psi.
5. Embedment depth is measured from the outside face of the concrete masonry unit.
6. Grout-filled CMU wall design must satisfy applicable design standards and be capable of withstanding applied loads.
7. Refer to allowable load-adjustment factors for spacing and edge distance on pp. 78-79.

1. The tabulated allowable loads are based on a safety factor of 5.0 for installations under the IBC and IRC.

Note: No installation within $45 / 8^{\prime \prime}$ of bed joint of hollow masonry block wall.
2. Values for 8 "-wide, lightweight, medium-weight and normal-weight concrete masonry units.
3. The minimum specified compressive strength of masonry, $\mathrm{f}^{\prime} \mathrm{m}$, at 28 days is $1,500 \mathrm{psi}$.
4. Embedment depth is measured from the outside face of the concrete masonry unit and is based on the anchor being embedded an additional $1 / 2$ "- through $11 / 4$ "-thick face shell.
5. Allowable loads may not be increased for short-term loading due to wind or seismic forces.
6. CMU wall design must satisfy applicable design standards and be capable of withstanding applied loads.
7. Do not use impact wrenches to install in hollow CMU.
8. Set drill to rotation-only mode when drilling into hollow CMU.
9. The tabulated allowable loads are based on one anchor installed in a single cell.
10. Distance from centerline of anchor to head joint shall be a minimum of $45 / 8^{\prime \prime}$.

| $1 / 4$ | $1 / 4$ | 23/8 | $3^{13 / 16}$ | $13 / 4$ | 4 | 130 | 105 | 120 |
| $3 / 8$ | $3 / 8$ | $23 / 8$ | $3^{13 / 16}$ | $13 / 4$ | 6 | 130 | 115 | 125 |

1. The tabulated allowable loads are based on a safety factor of 5.0 for installations under the IBC and IRC.
. Values for 8 "-wide, lightweight, medium-weight and normal-weight concrete masonry units.
2. The minimum specified compressive strength of masonry, $\mathrm{f}^{\prime} m$, at 28 days is $2,000 \mathrm{psi}$.
3. Embedment depth is measured from the outside face of the concrete masonry unit and is based on the anchor being embedded an additional $11 / 8^{\prime \prime}$ - through $11 / 4$ "thick face shell.
4. Allowable loads may not be increased for short-term loading due to wind or seismic forces.
5. CMU wall design must satisfy applicable design standards and be capable of withstanding applied loads.
6. Do not use impact wrenches to install in hollow CMU.
7. Set drill to rotation-only mode when drilling into hollow CMU.
8. Minimum edge and end distances are measured from anchor centerline to the edge and end of the CMU masonry wall, respectively. Refer to Figure 9 below.
9. Anchors must be installed a minimum of $1 \frac{1}{2} /{ }^{\prime \prime}$ from centerlie of bed joints. See Figure 9 for prohibited anchor installation locations.

Figure 9.
Anchor Installed in End of Hollow CMU Wall

# Load-Adjustment Factors for Titen HD Anchors in Face-of-Wall Installation in 8" Grout-Filled CMU: Edge Distance and Spacing, Tension and Shear Loads 

## How to use these charts:

1. The following tables are for reduced edge distance and spacing.
2. Locate the anchor size to be used for either a tension and/or shear load application.
3. Locate the embedment (E) at which the anchor is to be installed.
4. Locate the edge distance ( $c_{\text {act }}$ ) or spacing $\left(s_{a c t}\right)$ at which the anchor is to be installed.
5. The load adjustment factor $\left(f_{c}\right.$ or $\left.f_{S}\right)$ is the intersection of the row and column.
6. Multiply the allowable load by the applicable load adjustment factor.
7. Reduction factors for multiple edges or spacings are multiplied together.

Edge Distance Tension ( $\mathrm{f}_{\mathrm{c}}$ )

| $\begin{aligned} & c_{\text {act }} \\ & \text { (in.) } \end{aligned}$ | Dia. | $1 / 4$ | 3/8 | 1/2 | 5/8 | $3 / 4$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | E | 2112 | 23/4 | $31 / 2$ | $41 / 2$ | $51 / 2$ |
|  | $c_{c r}$ | 4 | 12 | 12 | 12 | 12 |
|  | $c_{\text {min }}$ | 1.25 | 4 | 4 | 4 | 4 |
|  | $\mathrm{f}_{\text {cmin }}$ | 0.77 | 1.00 | 1.00 | 0.83 | 0.66 |
| 1.25 |  | 0.77 |  |  |  |  |
| 2 |  | 0.83 |  |  |  |  |
| 3 |  | 0.92 |  |  |  |  |
| 4 |  | 1.00 | 1.00 | 1.00 | 0.83 | 0.66 |
| 6 |  | 1.00 | 1.00 | 1.00 | 0.87 | 0.75 |
| 8 |  | 1.00 | 1.00 | 1.00 | 0.92 | 0.83 |
| 10 |  | 1.00 | 1.00 | 1.00 | 0.96 | 0.92 |
| 12 |  | 1.00 | 1.00 | 1.00 | 1.00 | 1.00 |

See footnotes below.
Edge Distance Shear ( $\mathrm{f}_{\mathrm{c}}$ ) Shear Load Parallel to Edge or End

| Cact <br> (in.) | Dia. | $1 / 4$ | 3/8 | 1/2 | 5/8 | $3 / 4$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | E | $21 / 2$ | $23 / 4$ | $31 / 2$ | $41 / 2$ | 51/2 |
|  | $c_{c r}$ | 4 | 12 | 12 | 12 | 12 |
|  | $c_{\text {min }}$ | 1.25 | 4 | 4 | 4 | 4 |
|  | $\mathrm{f}_{\text {cmin }}$ | 0.58 | 0.77 | 0.48 | 0.46 | 0.44 |
| 1.25 |  | 0.58 |  |  |  |  |
| 2 |  | 0.69 |  |  |  |  |
| 3 |  | 0.85 |  |  |  |  |
| 4 |  | 1.00 | 0.77 | 0.48 | 0.46 | 0.44 |
| 6 |  | 1.00 | 0.83 | 0.61 | 0.60 | 0.58 |
| 8 |  | 1.00 | 0.89 | 0.74 | 0.73 | 0.72 |
| 10 |  | 1.00 | 0.94 | 0.87 | 0.87 | 0.86 |
| 12 |  | 1.00 | 1.00 | 1.00 | 1.00 | 1.00 |

See footnotes below.
Edge Distance Shear ( $\mathrm{f}_{\mathrm{c}}$ )
Shear Load Perpendicular to Edge or End (Directed Towards Edge or End)

| Cact <br> (in.) | Dia. | $1 / 4$ | 3/8 | 1/2 | 5/8 | $3 / 4$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | E | 2112 | $23 / 4$ | $31 / 2$ | $41 / 2$ | $51 / 2$ |
|  | $c_{c r}$ | 4 | 12 | 12 | 12 | 12 |
|  | $c_{\text {min }}$ | 1.25 | 4 | 4 | 4 | 4 |
|  | $\mathrm{f}_{\text {cmin }}$ | 0.71 | 0.58 | 0.38 | 0.30 | 0.21 |
| 1.25 |  | 0.71 |  |  |  |  |
| 2 |  | 0.79 |  |  |  |  |
| 3 |  | 0.89 |  |  |  |  |
| 4 |  | 1.00 | 0.58 | 0.38 | 0.30 | 0.21 |
| 6 |  | 1.00 | 0.69 | 0.54 | 0.48 | 0.41 |
| 8 |  | 1.00 | 0.79 | 0.69 | 0.65 | 0.61 |
| 10 |  | 1.00 | 0.90 | 0.85 | 0.83 | 0.80 |
| 12 |  | 1.00 | 1.00 | 1.00 | 1.00 | 1.00 |

1. $E=$ embedment depth (inches).
2. $c_{\text {act }}=$ actual end or edge distance at which anchor is installed (inches).
3. $c_{c r}=$ critical end or edge distance for $100 \%$ load (inches).
4. $c_{\text {min }}=$ minimum end or edge distance for reduced load (inches).
5. $f_{C}=$ adjustment factor for allowable load at actual end or edge distance.
6. $f_{c c r}=$ adjustment factor for allowable load at critical end or edge distance. $f_{c c r}$ is always $=1.00$.
7. $\mathrm{f}_{\text {cmin }}=$ adjustment factor for allowable load at minimum end or edge distance.
8. $f_{c}=f_{c \text { min }}+\left[\left(1-f_{c \text { min }}\right)\left(c_{\text {act }}-c_{\text {min }}\right) /\left(c_{c r}-c_{\text {min }}\right)\right]$.

## Load-Adjustment Factors for Titen HD Anchors in Face-of-Wall Installation in 8" Grout-Filled CMU: Edge Distance and Spacing, Tension and Shear Loads (cont.)

## How to use these charts:

1. The following tables are for reduced edge distance and spacing.
2. Locate the anchor size to be used for either a tension and/or shear load application.
3. Locate the embedment $(E)$ at which the anchor is to be installed.
4. Locate the edge distance ( $c_{\text {act }}$ ) or spacing ( $s_{\text {act }}$ ) at which the anchor is to be installed.
5. The load adjustment factor $\left(\mathrm{f}_{C}\right.$ or $\mathrm{f}_{s}$ ) is the intersection of the row and column.
6. Multiply the allowable load by the applicable load adjustment factor.
7. Reduction factors for multiple edges or spacings are multiplied together.

Edge Distance Shear ( $\mathrm{f}_{\mathrm{c}}$ )
Shear Load Perpendicular to Edge or End (Directed Away from Edge or End)

| Spacing Tension ( $\mathrm{f}_{\mathrm{s}}$ ) |  |  |  | IBC |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Sact } \\ & \text { (in.) } \end{aligned}$ | Dia. | 1/4 | 3/8 | 1/2 | 5/8 | $3 / 4$ |
|  | E | $21 / 2$ | $23 / 4$ | $31 / 2$ | $41 / 2$ | $51 / 2$ |
|  | $s_{c r}$ | 4 | 6 | 8 | 10 | 12 |
|  | $s_{\text {min }}$ | 2 | 3 | 4 | 5 | 6 |
|  | $\mathrm{f}_{\text {smin }}$ | 0.66 | 0.87 | 0.69 | 0.59 | 0.50 |

| 10 |  |  |  |  | 1.00 | 0.87 |
| 12 |  |  |  |  |  | 1.00 |

1. $E=$ embedment depth (inches).
2. $s_{\text {act }}=$ actual spacing distance at which anchors are installed (inches).
3. $s_{c r}=$ critical spacing distance for $100 \%$ load (inches).
4. $s_{\text {min }}=$ minimum spacing distance for reduced load (inches).
5. $\mathrm{f}_{S}=$ adjustment factor for allowable load at actual spacing distance.
6. $f_{\text {scr }}=$ adjustment factor for allowable load at critical spacing distance. $f_{\text {scr }}$ is always $=1.00$.
7. $\mathrm{f}_{\text {smin }}=$ adjustment factor for allowable load at minimum spacing distance.
8. $\mathrm{f}_{s}=\mathrm{f}_{\text {smin }}+\left[\left(1-\mathrm{f}_{\text {smin }}\right)\left(s_{\text {act }}-s_{\text {min }}\right) /\left(s_{c r}-s_{\text {min }}\right)\right]$.

[^0]:    Suggested fixture hole sizes are for structural steel thicker than 12 gauge only. Larger holes are not required for wood or thinner cold-formed steel members.

[^1]:    1. The tabulated allowable loads are based on a safety factor of 5.0.
    2. Values are for 8 "-wide concrete masonry units (CMU) filled with concrete, with minimum compressive strength of 2,500 psi and poured monolithically with the floor slab.
    3. Center \#5 rebar in CMU cell and concrete slab as shown in the illustration below.
