

For Use Beneath Vegetated Roof, Amenity Deck,  
and Other Overburden Applications

# Teranap<sup>®</sup> SBS Waterproofing Membrane

## Where Watertight Meets Worry-Free

Siplast developed the Teranap<sup>®</sup> SBS-Modified Bitumen Waterproofing System in the 1970s to meet the demand for vegetated roof and plaza deck waterproofing applications. The multi-ply membrane system provides robust waterproofing to withstand the challenges of these buried membrane applications and offers a reliable, high-performance solution for complex projects.

# Teranap® SBS Waterproofing Membrane

## Description:

The Teranap® waterproofing system includes a Teranap® finish ply, consisting of a fiberglass scrim/polyester mat composite impregnated and coated with high-quality SBS-modified bitumen with the top and bottom surfaces covered with a silica parting agent, and Paradiene 20 base ply engineered to retain its elasticity through the rigors of deck movement.

**Teranap® high-performance modified bitumen waterproofing ply is designed for use in homogeneous multi-layer modified bitumen plaza deck waterproofing membrane systems and offers many benefits:**

|                 |                     |                         |                   |
|-----------------|---------------------|-------------------------|-------------------|
|                 |                     |                         |                   |
| Low Maintenance | Multi-Ply Longevity | Exceptional Flexibility | Strong Durability |

## Advantages:

- Incorporates multi-ply construction providing exceptional cyclic fatigue performance and robust protection.
- Can be manufactured with granulated cap for extended exposure rating, providing greater flexibility in project schedules.
- Marries well with a number of Siplast products, including Parapro®, Veral™, and Parafor® flashing options.
- Installed with a 4" overlap, ensuring robust, continuous coverage.
- Miami Dade NOA and Florida Product Approval tested.

## Applications:

|             |               |               |
|-------------|---------------|---------------|
|             |               |               |
| Hot Asphalt | Cold Adhesive | Torch Applied |

## Complementary Overburden Solutions:

Pedestal Paver

Topping Slab

Vegetated Roof

Stormwater Management

In order to address numerous leaks, the David Lawrence Convention Center in Pittsburgh, PA, turned to Siplast's Teranap® System to provide a watertight membrane solution beneath their newly renovated amenity deck.
