

Terapro VTS Pro Fleece Reinforced

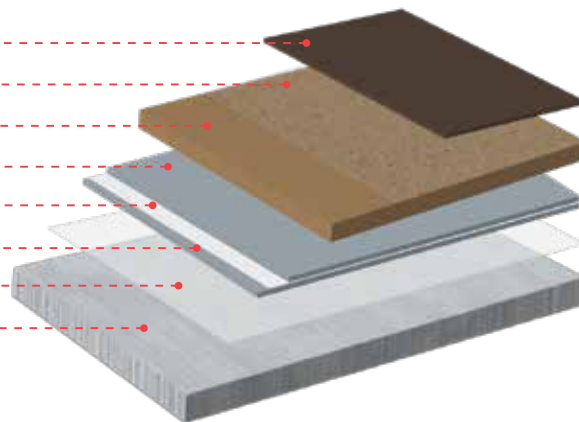

A parking garage is a uniquely challenging structure. It must protect cars and often condition spaces below while withstanding damaging emissions from those same vehicles. It must endure cyclic weathering and mechanical damage. And it must be utilitarian and low maintenance, while also providing a favorable first impression for customers. Terapro VTS Pro Fleece Reinforced meets these needs.

Advantages:

- Pro Fleece reinforced, liquid-applied PMMA resin-based system
- Resists shear loads from vehicular traffic
- Full-surface adhesion and creates an impermeable membrane
- Resilient – monolithic, durable, weather/UV resistant
- Fast-curing - ready for traffic in approximately 3 hours when installed properly
- Resistance to typical vehicular fluids and provides a skid resistant surface
- Can be applied in temperatures as low as 32°F
- Low VOC – formulated without solvents and isocyanate
- Utilizes substrate-penetrating primers
- System-integrated detail solutions
- Contains additional wearing layer to protect the reinforced waterproofing

The Terapro VTS system provides a high performance solution to the demanding waterproofing challenges of parking deck applications like this one, on a large shopping mall in the Pacific Northwest.

Terapro VTS Pro Fleece Reinforced

For Vehicular Traffic Areas Over Occupied (Interior) or Conditioned Spaces

Suitable For The Following Areas:

- Heavy traffic zones like ramps and turning areas and areas to exposed to the elements.
- Vehicular areas over occupied/conditioned space

The Terapro Base Resin layers with Pro Fleece layer provide additional protection. Terapro VTS bond strength, together with the tough crystal quartz surfacing, lends a level of durability to the system that is not often found in parking deck coatings.

The hard-wearing VTS system is completed with a layer of Pro Color Finish. The Pro Color Finish palette includes 16 long-wearing color options appropriate for traffic paths and low-maintenance markings for parking garages. To request a physical sample, please contact your Siplast Representative.

Commitment to Quality

Every batch of Terapro resin is assessed twice in the manufacturing process to help ensure proper formulation for high performance.

However, quality products are meaningless without a quality contractor. Siplast waterproofing systems are installed exclusively by Siplast Select Contractors. These independent professionals have met the qualifications of one of the best contractor certification programs in the industry - ours.
