

SONOTUBE[®]
BLASTMASTER[®]
blasting tubes

Dry hole durability.

Application

- *Down-hole blasting in dry quarry environments*

Sonotube® BlastMaster® blasting tubes preserve hole integrity, maximizing productivity

Time is never on your side in mining operations that involve down-hole blasting. You labor against the possibility that fractured layers of rock will collapse the hole. Sonotube® BlastMaster® blasting tubes help holes maintain their integrity.

Higher consistency and durability

Sonoco has engineered BlastMaster tubes from the ground up to overcome problems that undermine job site productivity. The engineered design makes these tubes strong from the inside out. Application of patented RainGuard® technology throughout the manufacturing process makes BlastMaster tubes the most consistent and durable

products on the market,

providing strength and integrity without the need for wax.

Advantages

- RainGuard technology resists tube delamination and collapse.
- Consistent, engineered design delivers structural integrity required.
- No messy wax.

Green strength and high availability

Sonoco brings a century of leadership in paper tube design, technology and manufacturing to your mining applications. The financial stability of a global company with a broad manufacturing footprint means you can count on distribution advantages with ongoing backup capability. BlastMaster tubes are available in a wide variety of diameters and lengths. They are also made from recycled paper, so choosing them reflects your commitment to sustainable practices.

- Made from recycled paper
- Manufactured and distributed throughout North America, minimizing lead times.

Blasting tubes in dry applications

Cost effective and easy to use, Sonotube BlastMaster blasting tubes deliver superior strength in down hole blasting applications. The tubes never create a waxy mess and can remain in place for five to ten days, providing the flexibility your construction schedule demands.
