**Notes:**

- Properties based on the AISI S100-2012. Safety factor NOT adjusted for AISI S220-11 for Ma determination
- Design thickness used for determination of properties. Minimum delivered thickness must be no less than 95% of design thickness.
- For deflection calculations, use effective I<sub>x</sub>.
- Effective properties are given as the minimum value for positive or negative bending.

## Hat Furring Channel (DWFC) Allowable Ceiling Spans - L/240

**Notes:**

- Allowable spans include 0.9 multiplier on safety factor, W, per AISI S220-11
- Single spans taken as the minimum span based on moment, shear, web crippling or deflection
- Multiple spans indicate two or more equal, continuous spans with span length measured support to support.
- Multiple spans taken as the minimum span based on moment, shear, web crippling, deflection combined bending and shear or combined and web crippling
- Web crippling values based on 1" bearing at end and interior supports.
