

EXOAIR® ECO

SIMPLIFIED ASSEMBLY OF FACTORY-MULLED WINDOW UNITS

Assemble factory-mulled windows with neatness and precision with Tremco's ExoAir® Eco impregnated pre-compressed tape.

Factory mulling reduces assembly time in the field, but can be time-consuming and complicated when it includes extensive detailing or window frames with complex contours. ExoAir Eco, a self-expanding, flexible foam tape is ideal for both factory and field-mulled window construction. Used in exposed or hidden applications, horizontal and vertical mulled window joint connections and new or replacement window and door frames, ExoAir Eco is a polyurethane foam that is impregnated with a modified acrylic resin and treated with a pressure-sensitive adhesive on one side for ease of installation.

FEATURES AND BENEFITS

- Seals by compression rather than bonding for easy handling and repositioning
- No squeezing out between gaps, eliminating smears in the factory and messy clean-up
- Uniform profile creates neat appearance and eliminates sealant skips
- Readily accommodates the complex contours of mating frames
- Fast to cut and position in place, versus tedious detailing, speeding the assembly process

ExoAir Eco shown in a factory mulled-window application.

QUICK & EASY INSTALLATION ON JOBSITES

When ExoAir Eco is used to tie the window to the rough opening or to another mulled window, the product expands and fills the joint creating a vapor-permeable, weathertight, thermal resistant seal. This allows the window installer a quick and easy process, speeding construction schedules and yielding reduced labor costs.

ADDITIONAL FEATURES AND BENEFITS

- Provides a UV stable, weathertight, vapor-permeable seal
- Eliminates water and air infiltration including wind-driven rain
- Remains permanently flexible allowing it to move during expansion/contraction cycles caused by thermal and structural movement
- Compatible with most porous or sensitive substrates including but not limited to: vinyl, wood, concrete, aluminum and fiberglass
- Low volatile emissions earning the product UL GREENGUARD Gold Certification
- Quick and easy installation with minimal surface preparation required
- Application during extreme weather and temperature conditions
- Compatible with several TremGlaze® Sealants
- Paintable with water-based, flexible paint
- Easy soap and water cleanup: no solvents, cartridges or pails

COMPLETE, COMPATIBLE WINDOW SYSTEM SOLUTIONS

We offer a complete, comprehensive line of TremGlaze sealants, foam, tapes, EnerSEAL™ 332 Hot Melt Butyl and EnerEDGE® IG spacers for residential window installation and in-plant applications.
