

Tremco Incorporated certifies the physical performance of Paraseal® Permanent Seam Tape™ (rubberized asphalt membrane laminated to a polyethylene reinforcing film) in approved applications. Permanent Seam Tape is used primarily for sealing the seams of Paraseal and Deckseal® applications when flood testing is desired. It is used on all seams for Paraseal Saltwater Grade applications, and with Paraseal LG when installed for vapor-proofing. The inherent adhesive and waterproofing properties of the rubberized-asphalt membrane effectively seal the HDPE liner face on Paraseal products, rendering the bentonite as a secondary waterproofing system back-up.
