

THERMastic® HOT BUILT-UP ROOFING SOLUTIONS

High-Performance Waterproofing.

Tremco offers state-of-the-art solutions for many roofing problems, whether it be a new, retrofit or replacement roof. Your Tremco representative is an expert at selecting the appropriate combination of products and systems to effectively meet your needs. When you need a high-performance built-up roof, look to Tremco's watertight THERMastic 100 and THERMastic 200 systems. Incorporating hot-melt adhesive instead of conventional coal tar pitch or asphalt as both the interply adhesive and protective top pour, THERMastic systems provide excellent flexibility and puncture resistance.

Watertight Security

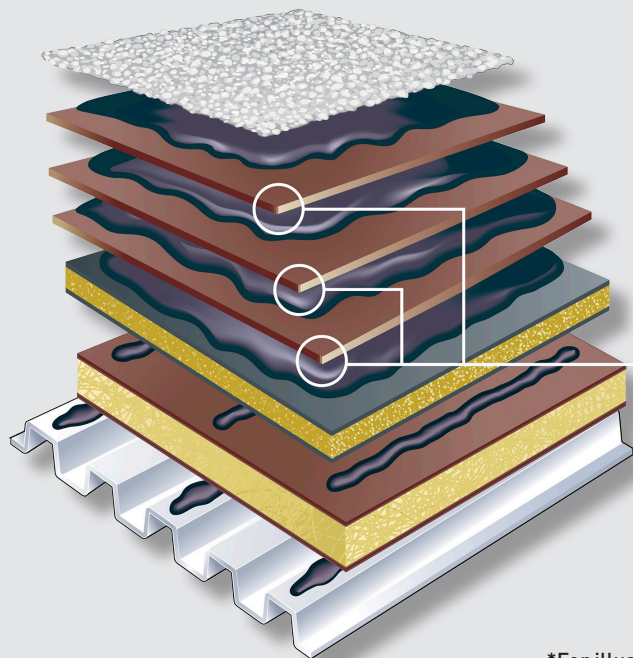

Tremco's THERMastic true advantage is its waterproofing agent: THERMastic Hot-Melt Adhesive. Made of high quality, unblown asphalt modified with a select SEBS polymer, THERMastic adhesive is far superior to regular mopping asphalt in terms of elongation, recovery and adhesion. Compared to other hot-melt built-up systems, THERMastic systems deliver much more for your money when it comes to the only characteristic that really matters – waterproofing.

THERM 200 **The Ultimate In Roofing Performance**

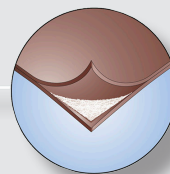

Tremco's THERM 200 high-performance, elastomeric built-up roofing system is the perfect solution when performance is critical. THERM 200 uses the inherent values of THERMastic Adhesive – elongation, recovery and adhesion – combined with three plies of PolyTHERM for superior elasticity. PolyTHERM is a continuous filament, spun-bonded, polyester roofing ply that is fully laminated with courses of THERMastic Hot-Melt Adhesive and manufactured by a patented process using proprietary heat resistant binders.

THERM 100 **Superior, Cost-effective Performance**

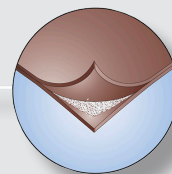

The THERMastic 100 high-performance built-up roofing system consists of three plies of THERMglass roofing ply applied between moppings of THERMastic Hot-Melt Adhesive. The THERM 100 system will withstand thermal shock and accommodate movement generated by lightweight steel deck construction and high R-factor insulations.

Benefits Of Tremco's Hot Built-up Roofing Systems

Superior elastomeric properties: Maximizes service by providing the highest resistance to rooftop exposure and thermal movement.

Uniform consistency: Controlled manufacturing processes ensure uniform characteristics in each and every THERMastic adhesive.

Multi-ply system: Provides extra, redundant protection and long-term performance.

FM Global Approvals: Assures better insurance rates for FM Global-insured facilities with certain configurations.
