

Magic Corner™

For drywallers who have a lot of inside corners to finish and not a lot of time, Trim-Tex's Magic Corner Expansion Bead lives up to its name. Like magic, it installs quickly and easily, even on off-angles and vaulted ceilings. Magic Corner counteracts inside-corner cracking from structural movement, allowing up to 3/8" in controlled movement.

093V Expansion

Control joints have met their match! This bead is meticulously crafted of both rigid and flexible PVC to create a deep "V" that flexes to accommodate 3/8" in building movement. Tear off strips make finishing easy.

STOCK NO.	LENGTH	PCS. PER BOX
093V	10'	20

Hideaway Expansion

This expansion bead features a shallow profile while still accommodating up to 3/8" in building movement thanks to its rigid and flexible PVC construction. Finish is a breeze with its tear off strips. The finished result produces a very stealthy control joint.

Deflection Bead

When a wall joint is subject to the stresses of building movement, the Wall Mounted Deflection Bead is the best solution for the job. Its flexible gasket is able to form a perfect seal within the joint, compressing and expanding during deflection (up to 7/16"), thus preventing inside corner cracking.

9220	10'	48

Flat Deflection Bead

This simple solution prevents inside corner cracking when installed against a ceiling or concrete deck that may be subject to movement, to be used alongside backing materials in the head-of-wall gap for a code-compliant assembly. Its flexible gasket compresses and expands, providing protection for up to 1/2" of deflection, while its tear-off strip leaves a clean finished edge.

Super Seal Tear Away[®] L Bead

Super Seal Tear Away possesses a flexible bubble gasket, which forms a perfect, permanent seal around windows, doors and areas where drywall butts up to concrete walls. This reduces sound transmission, replacing acoustical caulk, and provides relief from the stresses of structural movement. The attached tear-off strip acts as a protective mask for mudding.

9210	3/8"	10'	25

Truss Backing Angle

Truss uplift can cause inside corner cracking on interior partition walls that can be costly and time-consuming to repair. Attaching your framing to Truss Backing Angle eliminates this risk entirely, allowing trusses to expand and contract independently while the drywall along your inside corners stays firmly in place.
