INSTALLATION GUIDE

USG COMPÄSSO™ ELITE TRANSITIONS

EXTRUDED ALUMINUM

TRANSITION TRIMS – STRAIGHT

USG Compasso™ Elite Transitions are extruded aluminum trims that are used to create fascias between ceilings that are on different horizontal planes. There are two types available: acoustical lower to acoustical upper and drywall lower to acoustical upper. Existing USG Compasso™ Elite splice plates and tee attachment clips are compatible with USG Compasso™ Elite Transitions. No other special hardware is required.

GENERAL

Before installing the USG Compasso™ Transitions Trims, check the materials to ensure that all parts are present and undamaged. Read all installation instructions first and familiarize yourself with the system components. This is important because parts will become permanently damaged if installed incorrectly.

COMPONENTS

USG Compasso™ Elite DAS Transitions Trim – Drywall Lower to Acoustical Upper

Available in 2", 4" and 6" profiles. For use with 5/8" thick panels only.

USG Compasso™ Elite AAS Transitions Trim – Acoustical Lower to Acoustical Upper

Available in 2", 4" and 6" profiles.

TEE ATTACHMENT CLIPS

- Part no. – 279542 for USG Celebration™ systems, 279543 for all other USG Donn® Brand acoustical suspension systems and USG Drywall Suspension Systems.
- Tee attachment clips are used to connect main and cross tee suspension members to the USG Compasso™ Elite Transitions Trims. A preinstalled set screw is used to lock the clip onto the transition trim.
- Two framing screws (#6 x 7/16", supplied by the installer) are required to attach the clip to the tees. One attachment clip is required at each tee that abuts the transition trim.

SPLICE PLATES

- Part no. – 279540. Splice plates are used to join USG Compäso™ Elite Transitions Trim sections together.
- The splice plates slide into the end of each channel boss, and preinstalled set screws are tightened to lock the plates in place and securely align the joints.
- See tables below for number of splice plates required per joint depending on the trim profile and size.

Splice Plates Required per Joint

USG Compäso™ Elite AAS Soffit Trim	ALSFTACAC210	2
	ALSFTACAC410	2
	ALSFTACAC610	3
USG Compäso™ Elite DAS Soffit Trim	ALSFTDWAC210	2

FACTORY MITERED CORNER PIECES FOR FIELD ASSEMBLY REQUIRED SPLICES INCLUDED WITH CORNERS

Inside Corner Dimensions: 12'-3/4" x 12'-3/4" (4" Acoustical to Acoustical shown below)

Outside Corner Dimensions: 12" x 12" (4" Acoustical to Acoustical shown below)

HANGER WIRES/SUPPORT CLIPS

- No. 12 gauge galvanized soft annealed for standard installations.
- Hanger wires must be installed according to all local codes and standards, which may vary depending on geographic location and seismic zones.
- All main tees must be supported with hanger wires at 4 ft. o.c. max unless otherwise engineered by a design professional and approved by the local code jurisdiction.
- All main and cross tees must be supported by a hanger wire located within 8" from the USG Compäso™ Elite Transitions Trim.
- Some seismic zones may require that the USG Compäso™ Elite Transitions Trims be independently supported by the building structure. This can be accomplished by drilling holes at 4 ft. o.c. max at the top of the trim and installing hanger wires to the structure as normal.

Note: Support clips that are designed specifically to attach main tees to carrying channels can be used in lieu of hanger wires.

GENERAL INSTALLATION GUIDELINES

Install the suspension system according to the reflected ceiling plan. For USG Drywall Suspension Systems, do not install 5/8" USG Sheetrock® Brand gypsum panels until after the USG Compäso™ Elite Transitions Trim is installed.

- After the grid is installed, for each grid end that meets the transition trim, insert one tee attachment clip into the lower and upper bosses and secure the set screw. Leave enough tension for adjustment.

Exploded – USG Compäso™ Elite Acoustical to Acoustical Transition

Exploded – USG Compäso™ Elite Drywall to Acoustical Transition

GENERAL INSTALLATION GUIDELINES
CONT.

- Secure a tee attachment clip to each grid member that will connect to the transition trim. Install one framing screw into the center of the slotted screw hole. Leave enough tension so the attachment clip can be adjusted if needed. Use a piece of 5/8" gypsum board as needed to maintain proper spacing between trim and grid when aligning the attachment clip.
- Install the splice plates by sliding them into the bosses at the end of each transition trim joint. Loosely tighten the set screws and align the system square and true.

USG Compäso™ Elite Acoustical to Acoustical Transition

Elevation – USG Compäso™ Elite Drywall to Acoustical

GENERAL INSTALLATION GUIDELINES CONT.

- Optional: For USG Compásso™ Elite DAS trim splices, the joints can be reinforced by screw attaching a 12" nominal scrap tee or angle on top of the gypsum panels through the bottom flange at the splice location. While not required, this method helps minimize the possibility of cracking through the joint compound at the splice.

FINISHING RECOMMENDATIONS**

-
- After final alignment and the system is square and true, tighten all set screws and install a second framing screw into the tee attachment clips.
 - Install the gypsum panels as required.
-
- Important! To ensure proper joint treatment adhesion, lightly sand the taping flange before applying joint compound.
 - Embed mesh tape over the taping flange with setting-type joint compound such as USG Sheetrock® Brand Easy Sand™ Lightweight Setting-Type Joint Compounds. Setting-type joint compound is recommended for added strength and less shrinkage.
 - Apply a second coat of either ready-mixed or setting-type joint compound.
 - Apply a third coat as needed.
 - For level 5 finishes, after all joints have been taped and finished, apply a thin skim coat of joint compound and drywall primer over the entire gypsum panel surface, or use a product specifically designed for this purpose such as USG Sheetrock® Brand Tuff-Hide™ Primer-Surfacer.
