USG DONN® BRAND ZXLA™

ACOUSTICAL SUSPENSION SYSTEM

Cartersville, GA, Westlake, OH

Features and Benefits

- G90 hot-dipped galvanized steel body with aluminum cap, conforms to ASTM C635.
- Polyester paint finish and stainless steel clip for increased corrosion protection.
- Complies with all national code requirements, including seismic and fire-rated assemblies up to two hours.
- Proprietary Quick-Release™ cross tees.
- Tested for exterior wind-uplift applications.

For over a century, sustainable practices have naturally been an inherent part of our business at USG and CGC. Today, they help shape the innovative products that become the homes where we live, the buildings where we work and the arenas where we play. From the product formulations we choose, to the processes we employ, USG and CGC are committed to designing, manufacturing, and distributing products that minimize overall environmental impacts and contribute toward a healthier living space. We believe that transparency of product information is essential for our stakeholders and Environmental Product Declarations (EPDs) are the next step toward an even more transparent USG and CGC. For additional information, visit usg.com, cgcinc.com and usg.ecomedes.com.

Environmental Product Declaration

USG DONN® BRAND ZXLA™

ACOUSTICAL SUSPENSION SYSTEM

Cartersville, GA, Westlake, OH

This declaration is an Environmental Product Declaration (EPD) in accordance with ISO 14025 and ISO 21930: 2017. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc.

USG Corporation has sole ownership, liability, and responsibility for this EPD.

Environmental declarations from different programs (ISO 14025) may not be comparable. Comparison of the environmental performance of products using EPD information shall be based on the product's use and impacts at the building or construction works level, and therefore EPDs may not be used for comparability purposes when not considering the whole building life cycle. EPD comparability is only possible when all stages of a life cycle have been considered. However, variations and deviations are possible. Example of variations: Different LCA software and background LCI datasets may lead to differences in results upstream or downstream of the life cycle stages declared.

USG DONN® BRAND ZXLA™

ACOUSTICAL SUSPENSION SYSTEM

Cartersville, GA, Westlake, OH

1. Product System Documentation

1.1 Product Description

The USG™ Donn® Brand ZXLA™ Acoustical Suspension System is roll formed with a hot dipped galvanized body, and a painted aluminum cap. The system is generally used to suspend acoustical ceiling tiles and/or metal panels in demanding applications. It is manufactured by USG in Cartersville, GA, and Westlake, OH. It is tested in accordance with ASTM C635 Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings. This EPD covers the USG™ Donn® Brand ZXLA™ profiles.

The USG™ Donn® Brand ZXLA™ Acoustical Suspension System is covered by the following Construction Specification Institute (CSI) MasterFormat® codes.

- 09 22 26.23 Metal Suspension System
- 09 53 00 Acoustical Ceiling Suspension System
- 09 53 23 Metal Acoustical Ceiling Suspension Assemblies
- 09 54 36 Suspended Decorative Grids

Corresponding applicable UNSPSC codes include:

- 25172000 Suspension System Components

1.2 Designated Application

The USG™ Donn® Brand Acoustical Suspension System consists of main tees, cross tees and ancillary products (see USG product literature for typical installation instructions) that are assembled to provide a structure for the support of metal or non-metal ceiling panels.

1.3 Product Technical Data

Performance Attributes

- **Class A**
- **Fire-rated**
- **G90 galvanized body- corrosion resistant**
- **Evaluated for seismic applications per ICC-ES evaluation report ESR-1222 for allowable values and conditions of use.**
- **Tested for exterior wind uplift applications**

ACOUSTICAL SUSPENSION SYSTEM

Cartersville, GA, Westlake, OH

1.4 Placing on the Market/Application Rules

The USG™ Donn® Brand Acoustical Suspension System must be installed in accordance with all applicable USG installation guidelines and in accordance with ASTM C636 Standard Practice of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels. An approved installation guide entitled, Acoustical Suspension System – Installation Guide: Suspended Ceiling, is available on usg.com and cginc.com.

1.5 Delivery Status

USG™ Donn® Brand ZXLA™ Acoustical Suspension System arrive at the jobsite in cardboard boxes, which have been modeled in this study.

1.6 Product Composition

Table 1.2: Product composition

Material	USG™ Donn® Brand Intermediate Duty ZXLA™ Acoustical Suspension System	USG™ Donn® Brand Heavy Duty ZXLA™ Acoustical Suspension System
Galvanized Steel and Aluminum Coils	99.6%	99.6%
Paint	0.4%	0.4%
Total	100%	100%

1.7 Product Manufacture

During the manufacturing process, a piece of galvanized steel coil and a piece of coated aluminum coil are formed into the proper configuration using a series of driven dies. A piece of painted aluminum coil is similarly formed into the cap. A stainless steel clip is attached to both ends of the main tee and cross tee members allowing for connection of the various pieces. All process scrap is recycled.

1.8 Environment and Health During Manufacturing

USG and CGC have led the building sector's effort in developing and supplying sustainable construction materials. Today, sustainability is integrated into the design and manufacture of every wall, ceiling, and flooring product. As both a producer and a buyer of raw materials, we have a responsibility to review and select each material we use. Each decision we make is based on careful consideration of environmental and safety effects. Raw materials used in our products are carefully selected and go through a screening procedure. This due diligence helps to ensure our products are safe to handle in our manufacturing plants and on job sites while having minimal impact on occupant health and indoor and outdoor environments.

1.9 Packaging

USG™ Donn® Brand ZXLA™ Acoustical Suspension System USG Ceilings is packaged in cardboard boxes. USG encourages the proper recycling of these cardboard boxes. Both the production and disposal of these packaging materials were modeled in this study

1.10 Conditions of Use

To ensure the longevity of the product, USG™ Donn® Brand ZXLA™ Acoustical Suspension System should not be exposed to moisture, high humidity, or high temperature. Details for conditions of use may be found in the product specifications.

1.11 Distribution

The default transport distances per PCR (product transport from the point of manufacture to building site) of 497 miles (800 km) by diesel powered truck/trailer were used in this analysis.

1.12 Product Installation

The USG™ Donn® Brand ZXLA™ Acoustical Suspension System must be installed according to ASTM C636, ASTM E580, CISC and USG requirements. Alternate installation methods may be used when approved by the authority having jurisdiction. An approved installation guide entitled, Acoustical Suspension System – Installation Guide: Suspended Ceiling, is available on usg.com and cgcinc.com. Installation of this product is accomplished by manual labor using mostly hand tools. No material or energy inputs are required on the jobsite. Per the PCR, a 7% waste factor was used in this LCA study.

1.13 Environment and Health During Use Stage

This product is not expected to produce any unusual hazards during normal use.

1.14 Reference Service Life

The USG™ Donn® Brand ZXLA™ Acoustical Suspension System is a metal ceiling suspension system. Once installed, it should require no maintenance, refurbishment, or replacement. Accordingly, a default RSL of 75 years is assumed for this product. An assumed Estimated Service Life (ESL) of 75 years shall be used for building life.

USG DONN® BRAND ZXLA™
ACOUSTICAL SUSPENSION SYSTEM
Cartersville, GA, Westlake, OH

1.15 Re-Use Phase

With proper care, USG™ Donn® Brand ZXLA™ Acoustical Suspension System components are designed for disassembly and may be reused at the end of a building's life.

1.16 End-of-Life Disposal

USG™ DONN® BRAND ZXLA™ Acoustical Suspension System components are assumed to be recycled at end of life. Product disposal was modeled according to the guidelines provided in Part A, Table 2 (Product Disposal Assumptions by Region).

1.17 – Extraordinary Effects

Fire

All products covered by this EPD are certified to be Class A (flame spread of 25 or less, smoke developed of 50 or less per ASTM E84 or CAN ULc S102).

1.17.1 – Further Information

Further information can be found at usg.com and cgcinc.com.

2. LCA Calculation Rules

2.1 EPD Type

This EPD is a product specific, plant averaged EPD.

2.2 Functional Unit

The functional unit is defined as 0.092 square meters with optional reporting of one square foot (12"x12") of installed product.

	USG™ Donn® Brand Intermediate Duty ZXLA™ Acoustical Suspension System	USG™ Donn® Brand Heavy Duty ZXLA™ Acoustical Suspension System
Functional Unit	1.06E+00 kg/sm	1.12E+00 kgsm

ACOUSTICAL SUSPENSION SYSTEM

Cartersville, GA, Westlake, OH

2.2 System Boundary

This EPD represents a “cradle-to-grave” LCA analysis for USG™ Donn® Brand ZXLA™ Acoustical Suspension System. It covers all the production steps from raw material extraction (i.e., the cradle) to end of life disposal (grave).

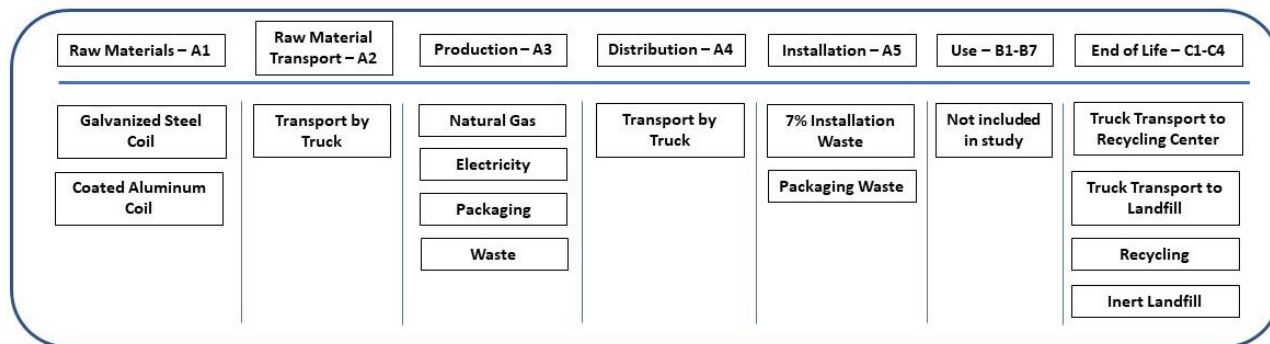

Figure 2.1: Specific processes covered by this EPD by life cycle stage

2.3 Estimates and Assumptions

The results are limited by the use of proxy processes rather than actual supplier generated primary data. This would include such processes as the production of the aluminum coil, which is specific to North America and covers the coil thickness used in this product but is not specific to the manufacturer used by USG. In addition, the data is limited in that the primary data was collected during 2022 and changes in operations may increase/decrease impacts in the future. Other data limitations include the use of secondary data sets instead of primary data for upstream and downstream processes, local impacts vs. global impacts, possible impacts vs. actual impacts, inherent uncertainty in the data sets, accuracy, and precision of impact assessment methodology, etc. Both human activity and capital equipment were excluded from the system boundary.

2.4 Cut-off Criteria

The requirements for the exclusion of inputs and outputs (cut-off rules) follows the guidance in ISO 21930 Section 7.1.8.

2.5 Background Data

All background was sourced from critically reviewed LCA for Experts databases from Sphera.

2.6 Data Requirements and Data Sources

The LCA model was created using the LCA for Experts software from Sphera (Version 10.7.1.28; Schema 8007). Specific comments related to data quality requirements cited in ISO 14025 Section 4.2.3.6.2 include the following.

Temporal: In the case of production, the LCI data was collected for the 2022 production year.

Geographical: Where possible, all processes were chosen as being representative of US manufacturing processes.

Technical: Where possible, the data selected for this study is specific to the technology used in the preparation of the various raw materials.

Precision: The raw material usage amounts were derived from plant data.

Completeness: Virtually all the significant raw material flows (> 99.9%) have been modeled.

Representative: Where possible all the data sets were selected to be representative of US-based production, are less than 10 years in age and are representative of the technology being employed.

Consistency: All the manufacturing processes were modeled in a consistent manner throughout this study in accordance with the goal and scope definitions.

Reproducibility: The information contained in this study, including raw material, energy and transportation distance inputs, have been fully documented in the LCA report.

Sources of Data: The sources for the processes used in this study have been fully provided in the LCA report and are representative of the material and energy sources used in actual production.

Uncertainty: The relative uncertainty associated with this study has been minimized. No significant assumptions have been made.

2.7 Period Under Review

All raw material and energy inputs are for the 2022 calendar year.

2.8 Allocation

No allocation was required in this study. The LCI data was collected for the 2022 production year.

Cartersville, GA, Westlake, OH

Comparisons cannot be made between product-specific or industry average EPDs at the design stage of a project, before a building or construction works has been specified. Comparisons may be made between product-specific or industry average EPDs at the time of product purchase only when product or construction works performance and specifications have been established and serve as a functional unit for comparison. Environmental impact results shall be converted to a functional unit basis before any comparison is attempted. Any comparison of EPDs shall be subject to the requirements of ISO 21930 or EN 15804. EPDs are not comparative assertions and are either not comparable or have limited comparability when they have different system boundaries, are based on different product category rules or are missing relevant environmental impacts. Such comparisons can be inaccurate and could lead to erroneous selection of materials or products that are higher impact, at least in some impact categories.

5. LCA Interpretation

The A1-C4 LCA results for the USG™ Donn® Brand Intermediate Duty ZXLA™ Acoustical Suspension System were dominated by product manufacturing; specifically the production of the steel and aluminum coil.
