

In environments like these,
airborne dust is more than
just a nuisance.

Introducing Sheetrock® Dust Control Joint Compound

Proven to dramatically reduce airborne dust from sanding

- Specify for healthcare and educational facilities or any occupied space where cleanliness and IAQ are critical
- Less mess and airborne dust reduces impact on building ventilation systems
- Helps to maintain a cleaner, more comfortable environment for building occupants during construction
- Very low VOC content — meets or exceeds all EPA and OSHA requirements

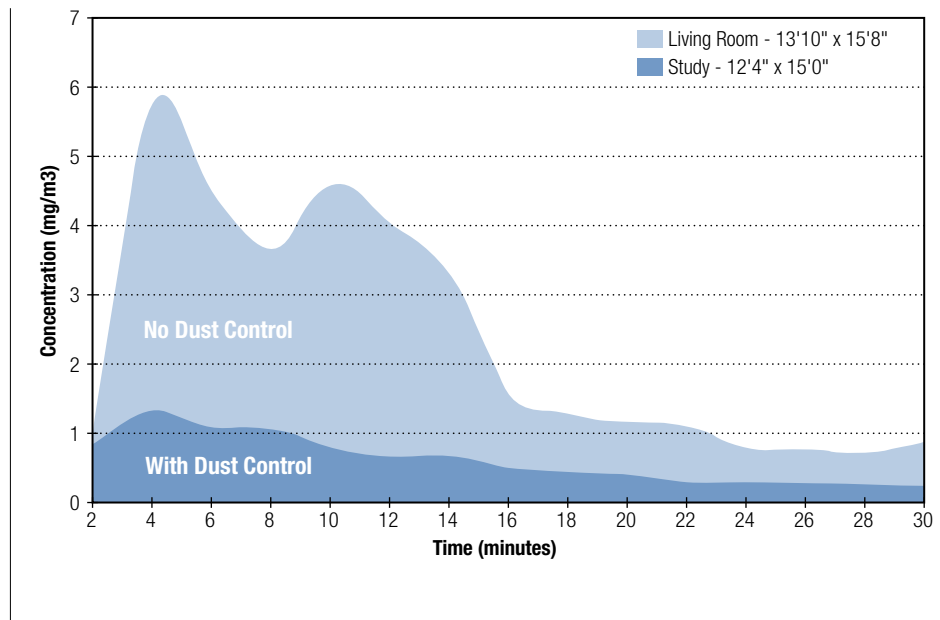

**SHEETROCK® Dust Control
Joint Compound**

Until now, sanding joint compound has been a messy job that introduces large amounts of airborne dust into new building or rehab environments and can cause problems in ventilation systems. SHEETROCK® brand dust control joint compound helps solve this problem with a patented formulation technology that binds up fine sanding residue to form heavier particles that fall straight to the floor instead of clouding the air. This innovative product is ideal for remodeling and repair projects in hospitals, schools, nursing homes and commercial office spaces—anywhere that cleanliness and indoor air quality are critical. Specify SHEETROCK dust control joint compound to reduce mess on the job and provide a more comfortable environment for building occupants.

The Difference is Clear

On-the-job testing conducted and analyzed by an independent third-party lab showed a considerable difference between SHEETROCK dust control joint compound and regular joint compound. Even 15 minutes after sanding stopped, airborne dust from the regular joint compound was appreciably higher than that from SHEETROCK dust control joint compound. The VOC content of SHEETROCK dust control joint compound is less than 2g/L.

Comparison of Dust Concentrations
