

**SECTION 09 5400**  
**SPECIALTY CEILINGS - USG**

**OPTIONAL CHECKLIST BELOW CONTAINS MUCH INFORMATION THAT MAY AID SELECTION OF APPROPRIATE PRODUCTS. IT IS NOT A SUBSTITUTE FOR MORE COMPLETE INFORMATION AVAILABLE FROM USG.**

**IT ALSO INCLUDES A CONFIGURATION TOOL FOR USG CEILING ASSEMBLIES. USING IT IS HIGHLY RECOMMENDED.**

**OPTIONAL CHECKLIST**

**INSTRUCTIONS**

Using the preselection tools found below allows the specifier to find ceiling solutions that meet the desired combination of specialty ceiling panels and suspension grids. Built-in linking scheme in the CONFIGURATION TOOL suggests compatible components and characteristics, and, on the other hand, shows which ceiling assembly solutions are impossible due to a combination of incompatible and or unavailable components.

CONFIGURATION TOOL needs to be used (from top to bottom) each time a different ceiling assembly needs to be defined.

Alternatively, it's possible to build the section using a partially or entirely manual approach.

**CONFIGURATION TOOL PROCEDURE**

Step 1. Select the specialty ceiling panel type.

Step 2. Select suspension grid that is compatible with the specialty ceiling panels

Step 3. If the component products selected are compatible with each other (there are no conflicts that would prevent them for being properly integrated into an assembly), scroll down to Part 2 of this Section and record the decisions in the Ceiling Assembly sequences. These include choices for specialty ceiling panels and suspension/support grids or framing required. This single-place description allows the contractor to properly bid and procure the major components of the acoustical ceiling.

Pro Tip 1: Ceiling Assembly sequences include as a default the suggested designation (e.g. "APC-1"). This designation **MUST** match the designation indicated on drawings. It is this designation that ties the drawings and specification together. The choice has an option for user-generated designation.

Pro Tip 2: When choices in Step 3 have been made, appropriate selections will be automatically activated in the component product lists in Part 2 of the Section. Only those items "in the project" will thereby be included.

Step 4. Change the View of the section from "Normal" to "Selected" to review content that will be included in the section. Go back to "Normal" view if items seem to be missing from lists of components.

**CEILING ASSEMBLIES REQUIRED IN PROJECT:**

Select to configure and include the first ceiling assembly.

- D. Fit wall panel units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around penetrations.
- E. Perimeter Trim: Field-cut trim pieces to lengths required and attach to substrates.
  - 1. Field miter corners at locations indicated or recommended by manufacturer.

### 3.06 INSTALLATION OF TRANSITION TRIM

- A. After the grids are installed, for each grid end that meets the transition trim, insert one tee attachment clip into the lower and upper bosses and secure the set screw. Leave enough tension for adjustment.
- B. At drywall suspension systems install gypsum panels after the transition trim is installed.
- C. Secure a tee attachment clip to each grid member that will connect to the transition trim. Install one framing screw into the center of the slotted screw hole. Leave enough tension so the attachment clip can be adjusted if needed. Follow manufacturer's instructions when aligning the attachment clip.
- D. Install the splice plates by sliding them into the bosses at the end of each transition trim joint. Loosely tighten the set screws and align the system square and true.

### 3.07 INSTALLATION OF PERIMETER "CLOUD" TRIM

- A. General:
  - 1. Examine the reflected ceiling layout and carefully plan the layout of the trim on the ceiling grid.
  - 2. Lay trim segments on top of the grid in the desired pattern and temporarily secure them in place.
  - 3. Temporarily splice the segments together.
  - 4. Assemble trim system, arranging the trim into smooth curves.
  - 5. Mark and cut the suspension grid.
  - 6. Install an attachment clip to each cut end of the grid. Attach the clip to trim section segment.
  - 7. Join trim and permanently splice the segments together.
- B. 8-Inch, 10-Inch, and 12-Inch Trim:
  - 1. Support segments by attaching diagonal braces to the installation clips using fasteners recommended by manufacturer. Attach one end of the brace to back of trim segment and the other to the tee. Ensure that the clip remains at 90 degrees to the ceiling plane. Repeat this procedure at 2-foot increments along the entire perimeter of the grid.
  - 2. Attach trim segments to the grid.
- C. Corners:
  - 1. Outside Corners: Slide a permanent splice plate into each side of the preformed outside corner. Attach one side of the outside corner to a trim segment. Connect a trim segment to the other side of the corner and secure with appropriate splice plate.
  - 2. Inside Corners: Follow manufacturer's instructions for installation of pre-formed and welded corners or for field-assembled corners from separate premitered pieces.

### 3.08 INSTALLATION OF CURTAIN POCKET TRIM

- A. Mounting: Mount curtain pocket trim in accordance with manufacturer's instructions and as appropriate for project conditions:
  - 1. Wall Cleat Mounting:
    - a. Determine the mounting height of the pocket and cleat combination. Mount wall cleats on the perimeter wall at that height.
    - b. Mount cleats at framing stud locations, on the center of the stud flange or face for the length of the pocket.
    - c. Secure cleat and pocket to wall using fasteners appropriate for attachment substrates.
    - d. Hook pocket on the mounting cleats. Use a metal screw for locking pocket to cleat.
  - 2. Hanger Wire Mounting:

- a. Mount using hanger wire located at **16 inches (406 mm)** on center by drilling a **1/4 inch (6 mm)** diameter hole into vertical mounting leg located on top of the extrusion, no more than 48 inches on center. USG recommends 12 gauge hanger wires for this type of installation.
- 3. Metal Framing Mounting:
  - a. Hang curtain pockets using standard **2-1/2-Inch (64 mm)** metal framing members **48 inches (1219 mm)** on center, maximum, hung from and braced with kickers attached to the underside of the structure.
- B. Continuous Lengths Installation: Use wall cleat, hanger wire or metal framing mounting method specified above. Connect curtain pockets segments with standard system splice plates. Use three (3) splice plates for a tight seamless connection; one located on the top of the pocket and two (2) along the vertical surface.
- C. Corners Installation: For 90-degree turns use manufacturer's pre-engineered inside and outside corners. Position corner segments in place using mounting method selected for the system. Use three (3) splice plates for a tight seamless connection to the main curtain pocket; one located on the top of the pocket and two (2) along the vertical surface.
- D. End Cap Terminations: Use the appropriate end cap for the indicated ceiling integration. Install using self-tapping mini screws in two or three locations depending on the end cap selected.
- E. Partition Wall Termination: Use a single splice plate bent in half at 90-degrees. Mount one flange of the plate to the curtain pocket and mount the other to the partition wall above the ceiling grid wall molding.
- F. Install **<<extension plates; closure plates; and \_\_\_\_\_>>** in accordance with manufacturer's instructions.
