

SkyMax

A One-of-a-Kind, Large Span Unit Skylight

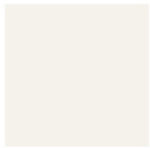

Doubling the square footage of standard flat glass skylights, SkyMax is able to span up to 35 square feet (or 10 feet at its longest dimension) for dramatic sky views without losing thermal energy.

SkyMax also incorporates a unique condensation channel to prevent leaking while eliminating the need for weep holes. So even with an expanse that big, you can guarantee to your customers that SkyMax will not leak.

All SkyMax have a standard 2604 powdered coat finish in VELUX Cool Grey. Additional designer colors, including copper cladding are available.
