QUICK-APPLIED REINFORCED TERMINATION STRIP (RTS)

Overview

Quick-Applied Reinforced Termination Strip (QA RTS) is a nominal 45-mil (1.1 mm) thick reinforced EPDM membrane strip with a nominal 30-mil (0.75 mm) cured EPDM splice tape adhesive laminated along one or both edges. The reinforced EPDM membrane is either 6" (150 mm) or 9" (225 mm) total widths, while the adhesive strips are 3" (75 mm) wide.

Six-inch QA RTS has pre-applied splice tape along one edge, and can be installed horizontally or vertically. Nine-inch QA RTS has pre-applied splice tape along both edges and can only be installed horizontally.

Please note: 6" QA RTS cannot be used in the field of the roof on mechanically attached roofing systems. 9" QA RTS must be used in the field of the roof on mechanically attached systems.

Features and Benefits

- 6" QA RTS provides added membrane perimeter securement at walls, curbs, and expansion joints
- 9" QA RTS is used for membrane securement in the field of the roof on mechanically attached systems

Installation

Installation: 6" QA RTS

1. Unroll and position QA RTS horizontally or vertically in the angle change with the pre-applied tape lying horizontally and facing up.

2. Position 2" Seam Fastening Plates or 2" Polymer Seam Plates ¼" to ¾" (3 to 19 mm) from the angle change —12" (305 mm) on center maximum—and secure with the appropriate Versico fastener. Do not fasten plates over the product’s release liner, as this will cause the liner to tear when removed.

3. Remove all foreign material: The adhesive on the QA RTS will not adhere to dusted or dirty surfaces. Remove any dust or foreign material by brooming and/or wiping with a clean, dry rag or Versico HP Splice Wipe. The use of Weathered Membrane Cleaner may be necessary. Allow the cleaner to dry thoroughly before proceeding.

   Note: Permeation-resistant gloves (that meet ANSI/ISEA 105-2005) are required for hand protection when cleaners or primers are being used.

4. Apply V-150 or Low-VOC EPDM Primer to the back of the field membrane.

5. Allow the primer to properly flash off until it does not transfer to a dry finger touch. Use hand pressure to install the field membrane to the QA RTS as soon as the primer flashes off to minimize potential dust contamination and promote adhesion in colder weather.

6. Pull the field membrane back to expose the unadhered portion of the QA RTS. Apply Versico Bonding Adhesive to the deck membrane, exposed QA RTS, and parapet wall.

7. Once the bonding adhesive has properly flashed off, roll membrane to the angle change and crease. Roll the membrane up the wall and broom for optimal adhesion.

8. Roll the entire 6" (152 mm) width of the QA RTS splice area with a 2" (51 mm)-wide roller, using positive pressure.
Installation: 9" QA RTS (Field of Roof)

1. Unroll and position QA RTS in the field of the roof with pre-applied tape facing up.
2. Position 2" Polymer Seam Fastening Plates—6" (152 mm) or 12" (302 mm) on center maximum—along the center line portion of the QA RTS and secure with a Versico fastener. Do not fasten plates over the product’s release liner, as this will cause the liner to tear when removed.
3. The entire surface where the QA RTS will be applied must be cleaned and primed. The adhesive on the QA RTS will not adhere to dusted/dirty surfaces. Remove any dirt or dust resulting from plate installation by wiping with a clean rag. If there is a heavy layer of dirt present, clean the splice area thoroughly with Weathered Membrane Cleaner.
4. Apply V-150 or Low-VOC EPDM Primer to the back of the field membrane.
5. Allow the primer to properly flash off until it does not fl ash off to minimize potential dust contamination and promote adhesion in colder weather.
6. Roll the entire 9" (228 mm) width of the QA RTS splice area with a 2" (51 mm)-wide roller, using positive pressure.

REVIEW CURRENT VERSICO SPECIFICATIONS AND DETAILS FOR SPECIFIC INSTALLATION REQUIREMENTS.

Precautions

1. Avoid prolonged contact with skin. In case of contact with skin, thoroughly wash affected area with soap and water.
2. Prolonged jobsite storage temperatures in excess of 90°F (32°C) may affect product shelf life.
3. In warm, sunny weather, keep QA RTS in the box or in a shaded area until ready to use.
4. Storage and use of QA RTS at temperatures below 40°F (4°C) will result in a loss of adhesive tack, and in extreme cases, will result in no bond to the substrate. Overnight storage must be available to keep the temperature of the QA RTS at a minimum of 60°F (15°C). Hot boxes for jobsite storage must be provided to maintain a minimum product temperature of 40°F (4°C).
5. QA RTS must be stored in a dry area.
6. Due to solvent flash-off, condensation may form on freshly applied primer when the ambient temperature is near the dew point. If condensation develops, the application of primer and installation of RTS must be discontinued, as proper adhesion will not be achieved. Allow the primer surface to dry and apply a thin freshener coat of primer to the previously coated surface when conditions allow.
7. Seam Fastening Plates and Versico Fasteners must be used when installing QA RTS.
8. QA RTS is intended for use with VersiGard (black) membrane. Use with VersiGard (white) membrane will result in discoloration of the white membrane surface over time.
9. In order to achieve proper adhesion, the following steps must be followed when installing QA RTS at temperatures below 40°F (5°C).
   A. After the primer has been applied and allowed to dry properly, install the membrane over the RTS. Heat the top of the membrane directly over the tape with a hot-air gun and immediately roll with a hand roller. The heated surface should be very hot to the touch of bare skin. Take care not to burn or blister the membrane.
10. KEEP OUT OF THE REACH OF CHILDREN.
