

Plus TPO Roofing Systems

BUILDING PERFORMANCE

VERSIWELD

Plus TPO Roofing Systems

VersiWeld® Plus TPO is Versico's thickest, most durable, and longest-lasting TPO membrane. Available in standard and fleece backed versions, VersiWeld Plus TPO provides excellent long-term durability and exceptional resistance to hail and punctures. VersiWeld Plus TPO also offers superb UV resistance due to the increased levels of weathering package that thicker membranes contain.

Versico's VersiWeld Plus TPO products include:

- 80-mil VersiWeld TPO
- 135-mil VersiFleece TPO
- 155-mil VersiFleece AC TPO

WHY CHOOSE VERSIWELD PLUS TPO?

OctaGuard XT™ Weathering Package

Versico's OctaGuard XT weathering package is a blend of eight performance-enhancing ingredients designed to protect VersiWeld Plus TPO membranes against damaging heat and UV exposure. Independent test results have demonstrated that VersiWeld Plus TPO with the OctaGuard XT weathering package provides superior long-term protection against the elements.

- The OctaGuard XT weathering package enables VersiWeld Plus TPO membrane to withstand the most extreme heat and UV conditions.
- Combined with Versico's time-tested TPO formulation, the OctaGuard XT weathering package provides a longer-lasting and more energy-efficient TPO roofing system.

Dependability

Because of their unmatched performance, VersiWeld Plus membranes are available with a variety of enhanced warranty packages. A warranted system must include all Versico supplied products, must be installed by a Versico Authorized Contractor and inspected by a trained Versico Field Service Representative to ensure conformance to Versico specifications. The warranty packages available for VersiWeld Plus membranes include:

- Puncture warranty
- 10-year reflectivity warranty (available for white membranes)
- 30-year No Dollar Limit watertight warranty, which covers:
 - Membrane, insulation, fasteners, and terminations
 - Accidental puncture
 - Wind damage up to 120 mph
 - Hail damage (up to 2")

Each detail of a VersiWeld Plus TPO roofing system is meticulously engineered by Versico to ensure its long-term performance. Every square inch of VersiWeld Plus TPO is enhanced with the most advanced weathering package on the market: Versico's OctaGuard XT.

Because thicker TPO membranes contain higher levels of the OctaGuard XT weathering package, Versico's 80-mil VersiWeld Plus TPO provides longer-lasting protection against the negative effects of UV degradation and heat exposure. The additional protection provided by an upgrade to VersiWeld Plus TPO often adds as little as 8% to the system's total installed costs, while increasing the lifespan of the roof by as much as 33%.

All of these dependable attributes lead to unmatched warranties for VersiWeld Plus TPO roof systems.

Eco-Friendly

VersiWeld Plus TPO can help save energy in hot climates where buildings can benefit from long-term savings in cooling costs. White and tan VersiWeld Plus TPO membranes are ENERGY STAR®-qualified and Cool Roof Rating Council (CRRC) certified. These “cool” reflective membranes can greatly diminish a building’s energy consumption by reducing the need for air conditioning throughout the year. VersiWeld Plus TPO’s environmentally friendly characteristics and energy-efficient advantages make it one of the most sustainable roof systems on the market today.

PV-Ready

VersiWeld Plus TPO is an excellent choice to support energy-producing rooftop photovoltaic (PV) systems. Because of the cost of a solar installation, it is common for building owners to wait several years after the purchase of a new roof before adding a PV system. Solar-ready VersiWeld Plus TPO gives building owners a high-quality, durable roof that is ready for a future upgrade to PV. The additional protection provided by VersiWeld Plus TPO membrane allows the roofing system to withstand abuse by the elements, including higher wind speeds, accidental punctures, water infiltration, and more. Installing Versico’s VersiWeld Plus TPO in conjunction with a 30-year No Dollar Limit warranty will provide exceptional protection under any PV investment.

Certified Fabricated Accessories

To promote ease of installation, Versico offers more than a dozen prefabricated accessories, as well as custom-made accessories to meet any and all roofing needs. These Certified Fabricated Accessories (CFAs) carry Versico’s CFA stamp of approval, so it is easy to determine that the accessories on a roof are manufactured to the highest quality standards. CFAs are perfect for any job because:

- CFAs save time and money during installation.
- CFAs provide improved waterproofing performance around penetrations.
- CFAs can be custom-fabricated for any type of penetration.
- CFAs provide a consistent, professional look across the entire roof.
