

AIR-SHIELD™

Self-Adhering Air/Vapor and Liquid Moisture Barrier

Provide Excellent Building Envelope Protection with AIR-SHIELD From W. R. MEADOWS

AIR-SHIELD is a strong and durable self-adhesive membrane that is protected by a special release paper. It remains flexible when surface mounted and will adhere to most primed surfaces.

AIR-SHIELD self-adhering air/vapor and liquid moisture barrier is part of a total W. R. MEADOWS system to complete the building envelope. It is a roll-type product that is nominally 40 mils thick. The membrane's controlled thickness is fabricated from cross-laminated polyethylene bonded to specially modified rubberized asphalt.

AIR-SHIELD offers excellent resistance to punctures during installation. AIR-SHIELD can also be used as a transition membrane to provide protection against water infiltration in critical detail areas, such as window and door openings, deck-to-wall intersections, corner boards, wall-to-wall tie-ins, foundation sill plates, sheathing panel seams, under stucco finishes, masonry walls, and other non-roof detail areas.

FEATURES/BENEFITS:

- Low permeability
- Provides a complete above-grade air, vapor, and water barrier on a variety of construction materials.
- Controlled thickness membrane is ideal for air barrier applications.
- Cross-laminated polyethylene film has excellent tensile strength, elongation, and tear resistance.
- Modified membrane is flexible at low temperatures.
